information and evolution **Formal Methods for Components and Objects** Frank S. de Boer, Marcello M. Bonsangue, Susanne Graf, Willem-Paul de Roever, 2005-09-19 Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design However their application to the development of large systems requires more emphasis on specification modelling and validation techniques supporting the concepts of reusability and modifiability and their implementation in new extensions of existing programming languages This book presents revised tutorial lectures given by invited speakers at the Third International Symposium on Formal Methods for Components and Objects FMCO 2004 held in Leiden The Netherlands in November 2004 The 14 revised lectures by leading researchers present a comprehensive account of the potential of formal methods applied to large and complex software systems such as component based systems and object systems The book provides an unique combination of ideas on software engineering and formal methods that reflect the expanding body of knowledge on modern software systems **Euro-Par '96 - Parallel Processing** Luc Bouge, 1996-08-14 Content Description Includes bibliographical references and index

Metalevel Architectures and Separation of Crosscutting Concerns Akinori Yonezawa, Satoshi Matsuoka, 2003-06-30. This volume constitutes the proceedings of REFLECTION 2001, the Third International Conference on Metalevel Architectures and Separation of Crosscutting Concerns, which was held in Kyoto, September 25-28, 2001. Metalevel architectures and reflection have drawn the attention of researchers and practitioners throughout computer science. Reflective and metalevel techniques are being used to address real-world problems in such areas as programming languages, operating systems, databases, distributed computing, expert systems, and web computing. Separation of concerns has been a guiding principle of software engineering for nearly 30 years, but its known benefits are seldom fully achieved in practice. This is primarily because traditional mechanisms are not powerful enough to handle many kinds of concerns that occur in practice. Over the last 10 years, to overcome the limitations of traditional frameworks, many researchers, including several from the reflection community, have proposed new approaches. For the first time, papers on advanced approaches to separation of concerns were explicitly solicited. Following the success of previous conferences such as IMSA 92 in Tokyo, Reflection 96 in San Francisco, and Reflection 99 in Saint Malo, we hope that the conference provided an excellent forum for researchers with a broad range of interests in metalevel architectures, reflective techniques, and separation of concerns in general.

Special Issues in Object Oriented Programming Max Mühlhäuser, 1997-01-01.

Concurrent Object-Oriented Programming and Petri Nets Gul A. Agha, 2001-04-18. Concurrency and distribution have become the dominant paradigm and concern in computer science. Despite the fact that much of the early research in object-oriented programming focused on sequential systems, objects are a natural unit of distribution and concurrency, as elucidated early on by research on the Actor model. Thus, models and theories of concurrency, the oldest one being Petri nets and their relation to objects, are an attractive topic of study. This book presents state-of-the-art results on Petri nets and concurrent object-oriented programming in a coherent and competent way. The 24 thoroughly reviewed and revised papers are organized in three sections. The first consists of long papers, each presenting a detailed approach to integrating Petri nets and object orientation. Section II includes shorter papers with emphasis on concrete examples to demonstrate the approach. Finally, section III is devoted to papers which significantly build on the Actor model of computation.
