Kühtreiber, Robert P. Lanza, William L. Chick, 2013-12-01 The concept of using encapsulation for the immunoprotection of transplanted cells was introduced for the first time in the 1960s Microencapsulated cells might be protected from destruction and from participation in immunological processes while the enclosing membrane would be permeable to small molecules of specific cellular product which could then enter the general extracellular compartment of the recipient For instance encapsulated endocrine cells might survive and maintain an effective supply of hormone Chang Ph D Thesis McGill University 1965 Chang et al Can J Physiol Pharmacol 44 115 128 1966 We asked Connaught Laboratories Ltd in Toronto to put this concept into practice In 1980 Lim and Sun from Connaught Laboratories reported on the successful implantation of poly L lysine alginate encapsulated rat islets into a foreign host Lim and Sun Science 210 908 909 1980 Now many groups around the world are making tremendous progress in the encapsulation of a multitude of cell types Kühtreiber Lanza and Chick have invited many cell encapsulation groups from around the world to contribute to this book The result is a very useful reference

book in this rapidly growing area With so many excellent authors describing in detail the different areas of cell encapsulation my role here will be to briefly discuss a few points

Physiology of Immobilized Cells J. A. M. de Bont,1990 The goal of this symposium was to cover the various important aspects of immobilized cells and to bring together scientists from different disciplines In view of the projected importance of the use of immobilized cells in future biotechnological processes it is essential that a better insight into the physiology of immobilized cells is obtained The performance of artificially immobilized cells was compared with the role immobilized cells play in nature and both physico chemical and physiological aspects were handled Special attention was given to novel approaches in the study of immobilized cells since the study of such cells today is not only based on traditional cultivation experiments but also depends very much on sophisticated physico chemical instrumentation Since the physiological conditions of immobilized cells is becoming increasingly important a better understanding will facilitate the prediction of behaviour of certain cells when immobilized Furthermore a development is foreseen towards employing various means to modulate microbial physiology in desirable directions Considering this area has been hitherto overlooked the proceedings in the present volume will present

an overall picture of the situation and will encourage research into a very specific field of biotechnology

Biodesulfurization in Petroleum Refining Nour Shafik El-Gendy, Hussein Mohamed Nabil Nassar, 2018-10-02 From basic tenets to the latest advances this is the most comprehensive and up to date coverage of the process of biodesulfurization in the petroleum refining industry Petroleum refining and process engineering is constantly changing No new refineries are being built but companies all over the world are still expanding or re purposing huge percentages of their refineries every year year after year Rather than building entirely new plants companies are spending billions of dollars in the research and development of new processes that can save time and money by being more efficient and environmentally safer Biodesulfurization is one of those processes and nowhere else it is covered more thoroughly or with more up to date research of the new advances than in this new volume from Wiley Scrivener Besides the obvious benefits to biodesulfurization there are new regulations in place within the industry with which companies will over the next decade or longer spend literally tens if not hundreds of billions of dollars to comply Whether for the veteran engineer needing to update his or her library the beginning engineer just learning about biodesulfurization or even the student in a chemical engineering class this outstanding new volume is a must have Especially it covers also the bioupgrading of crude oil and its fractions biodenitrogenation technology and application of nanotechnology on both biodesulfurization and biodenitrogenation technologies

Immobilization of Enzymes and Cells José M. Guisán, 2008-02-05 Enzymes and whole cells are able to catalyze the most complex chemical processes under the most benign

experimental and environmental conditions In this way enzymes and cells could be excellent catalysts for a much more sustainable chemical industry However enzymes and cells also have some limitations for nonbiological applications fine chemistry food chemistry analysis therapeutics and so on Enzymes and cells may be unstable difficult to handle under nonconventional conditions poorly selective toward synthetic substrates and so forth From this point of view the transformation from the laboratory to industry of chemical processes catalyzed by enzymes and cells may be one of the most complex and exciting goals in biotechnology For many industrial applications enzymes and cells have to be immobilized via very simple and cost effective protocols in order to be re used over very long periods of time From this point of view immobilization simplicity and stabilization have to be strongly related concepts Over the last 30 years a number of protocols for the immobilization of cells and enzymes have been reported in scientific literature However only very few protocols are simple and useful enough to greatly improve the functional properties of enzymes and cells activity stability selectivity and related properties

Biotechnology in Food Science & Technology, 1981-1986 Susan Whitmore, 1986

Synthetic Microstructures in Biological Research M. Peckerar, J.M. Schnur, 2013-11-11 The Third International Conference on Synthetic Microstructures in Biological Research SMIBR was held in Williamsburg Virginia September 9 12 1991 This book represents the compilation of many of the papers and posters presented at the meeting Publications resulting from previous SMIBR meetings held at Airlie House Airlie Virginia March 24 26 1986 and March 20 23 1988 can be obtained from the Institute of Electrical and Electronic Engineers Inc IEEE Service Center 908 562 5418 The purpose of these conferences is to provide an interface between the engineering community and those at the cutting edge of biological and related material science The overriding motive for assembling representatives from these diverse disciplines is clear Engineers even in 1986 could manipulate materials over dimensional scales on the order of those critical to biological systems The devices that emerge from these manipulations could then be tailored to monitor system function more directly with significantly more localization than ever before Thus one important goal of the meetings is to provide the detailed specifications required for effective interfacing of devices with biological systems under investigation

Carbohydrate Chemistry John F Kennedy, 2007-10-31

Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject especially in areas of medicinal chemistry and biology In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology Glycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established for example by the preparation of specific carbohydrate based antigens especially cancer specific oligosaccharides and glycoconjugates Coverage of topics such as nucleosides amino sugars alditols and cyclitols also covers much research of relevance to biological and medicinal chemistry Each volume of the series brings together references to all published work in given areas

of the subject and serves as a comprehensive database for the active research chemist Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis
