A Framework for Realtime 3-D Reconstruction by Space Carving Using Graphics Hardware Christian Nitschke, 2007-03-05 Inhaltsangabe Introduction Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There is a relation to Augmented and Mixed Reality AR MR Computer Supported Collaborative Work CSCW Computer Aided industrial architectural Design CAD modeling of the real world e g computer games scenes effects in movies entertainment e g 3D TV Video and recognition analyzing of real world characteristics by computer systems and robots There exists a powerful algorithm theory for shape reconstruction from arbitrary viewpoints called shape from photo consistency However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for shape from photo consistency Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The thesis is organized as follows Chapter 1 contains an introduction giving an overview with classification of related techniques statement of the main problem novelty of the proposed approach and its fields of application Chapter 2 surveys related work

in the area of dynamic scene reconstruction by shape from silhouette and shape from photo consistency The focus lies on high performance reconstruction and hardware acceleration Chapter 3 introduces the theoretical basis for the proposed

Empowering Intranets to Implement Strategy, Build Teamwork, and Manage Change D. Keith Denton, 2002-12-30

Technologically driven information overloads corporate leaders managers and employees alike forcing them into a reactive mode with little time for reflection or strategic thinking When the survey is completed the teleconference over and the weekend retreat a distant memory we go back to our jobs unchanged We hope that our activities contribute to corporate objectives but we quickly lose sight of the connection between our work and critical outcomes It doesn't have to be that way Denton explains how to combine new interactive Intranet Web based technology with new managerial software to focus on strategic decision making effective team management and the big picture Along with its companion Web site www.CIVID3.com this book provides an innovative solution that integrates and displays your critical information in real time Condense all the reports received from finance operations marketing and other divisions into a single interactive visual display that's always up to date Establish two way communication that allows managers and workers at all levels of the company to participate This is the first system to graphically display on a single desktop screen the status of your key organizational and group performance measures Combine outcomes and processes Use subjective as well as objective information Integrate and display the results in a user friendly format in real time This book's solution allows organizational members to focus on their ultimate purpose and makes it easier to implement strategic or operational decisions

Exploiting Semantic Web Knowledge Graphs in Data Mining P. Ristoski, 2019-06-28 Data Mining and Knowledge Discovery in Databases KDD is a research field concerned with deriving higher level insights from data The tasks performed in this field are knowledge intensive and can benefit from additional knowledge from various sources so many approaches have been proposed that combine Semantic Web data with the data mining and knowledge discovery process This book *Exploiting Semantic Web Knowledge Graphs in Data Mining* aims to show that Semantic Web knowledge graphs are useful for generating valuable data mining features that can be used in various data mining tasks In Part I Mining Semantic Web Knowledge Graphs the author evaluates unsupervised feature generation strategies from types and relations in knowledge graphs used in different data mining tasks such as classification regression and outlier detection Part II Semantic Web Knowledge Graphs Embeddings proposes an approach that circumvents the shortcomings introduced with the approaches in Part I developing an approach that is able to embed complete Semantic Web knowledge graphs in a low dimensional feature space where each entity and relation in the knowledge graph is represented as a numerical vector Finally Part III Applications of Semantic Web Knowledge Graphs describes a list of applications that exploit Semantic Web knowledge graphs like classification and regression showing that the approaches developed in Part I and Part II can be used in applications in various domains The book will be of interest to all those working in the field of data mining and KDD
