Integrated Science Helen M. Parke, 2000 *Integrated Science* Carolina Academic Press, 1999 **Successes, Limitations, and Frontiers in Ecosystem Science** Michael L. Pace, Peter M. Groffman, 2013-12-01 Research on the ecosystems has emerged in recent decades as a vital successful and sometimes controversial approach to environmental science Ecosystem science has addressed issues such as human alteration of biogeochemical cycles ecological complexity and biodiversity and ecological response to climate change As a central and integrating science ecosystem level studies have been highly successful This book emphasizes the idea that much of the progress in ecosystem research has been driven by the emergence of new environmental problems that could not be addressed by existing approaches By focusing on successes limitations and frontiers in ecosystem studies it will be welcomed by students and scientists throughout the ecological and environmental communities *Integrated Science* Carolina Academic Press, 1999 **Crossing Boundaries in Science**

Teacher Education Klaus-Henning Hansen, Wolfgang Gräber, Manfred Lang, 2012 This book is based on the European Comenius project CROSSNET with eight case studies about innovation and science teacher education in six European countries Guiding questions were how teachers policy makers and teacher educators collaborate in the process of change and how local background projects respond to opportunities for the exchange of experiences and reflection in terms of a common theoretical framework of boundary crossing The case studies were conducted by local coordinators and contracted teachers They are supplemented by a cross case analysis of common and distinct features in the projects and an essay about the relationship between boundary crossing transformative learning and curriculum theory Main outcomes are about school based reform and collaboration for science education **Unifying Geography** David T. Herbert, John A.

Matthews, 2004-08-05 It can be argued that the differences in content and approach between physical and human geography and also within its sub disciplines are often overemphasised The result is that geography is often seen as a diverse and dynamic subject but also as a disorganised and fragmenting one without a focus Unifying Geography focuses on the plural and competing versions of unity that characterise the discipline which give it cohesion and differentiate it from related fields of knowledge Each of the chapters is co authored by both a leading physical and a human geographer Themes identified include those of the traditional core as well as new and developing topics that are based on subject matter concepts methodology theory techniques and applications Through its identification of unifying themes the book will provide students with a meaningful framework through which to understand the nature of the geographical discipline Unifying Geography will give the discipline renewed strength and direction thus improving its status both within and outside geography
