Intelligent Help Systems for UNIX Stephen J. Hegner, Paul Mc Kevitt, Peter Norvig, Robert L. Wilensky, 2012-12-06 In this international collection of papers there is a wealth of knowledge on artificial intelligence AI and cognitive science CS techniques applied to the problem of providing help systems mainly for the UNIX operating system The research described here involves the representation of technical computer concepts but also the representation of how users conceptualise such concepts The collection looks at computational models and systems such as UC Yucca and OSCON programmed in languages such as Lisp Prolog OPS 5 and C which have been developed to provide UNIX help These systems range from being menu based to ones with natural language interfaces some providing active help intervening when they believe the user to have misconceptions and some based on empirical studies of what users actually do while using UNIX Further papers investigate planning and knowledge representation where the focus is on discovering what the user wants to do and figuring out a way to do it as well as representing the knowledge needed to do so There is a significant focus on natural language dialogue where consultation systems can become active incorporating user modelling natural language generation and plan recognition modelling metaphors and users mistaken beliefs Much can be learned from seeing how AI and CS techniques can be investigated in depth while being applied to a real test bed domain such as help on UNIX [Intelligent Help Systems for UNIX](#), 2000 [Intelligent Help Systems for UNIX](#), 2000 **User Modeling** Anthony Jameson, Cecile Paris, Carlo Tasso, 2014-05-04 User modeling researchers look for ways of enabling interactive software systems to adapt to their users by constructing maintaining and exploiting user models which are representations of properties of individual users User modeling has been found to enhance the effectiveness and or usability of software systems in a wide variety of situations Techniques for user modeling have been developed and evaluated by researchers in a number of fields including artificial intelligence education psychology linguistics human computer interaction and information science The biennial series of International Conferences on User Modeling provides a forum in which academic and industrial researchers from all of these fields can exchange their complementary insights on user modeling issues The published proceedings of these conferences represent a major source of information about developments in this area [Explorations in Intelligent Tutoring and Help](#) Radboud Winkels, 1992 *Human-Computer Interaction* Julie Jacko, Constantine Stephanidis, 2003-09-01 This is the second volume in the HCI International Conference Proceedings 2003 See following arrangement for details [Personalization Techniques and Recommender Systems](#) Gulden Uchyigit, Matthew Y. Ma, 2008 The phenomenal growth of the Internet has resulted in huge amounts of online information a situation that is overwhelming to the end users To overcome this problem personalization technologies have been extensively employed The book is the first of its kind representing research efforts in the diversity of personalization and recommendation techniques These include user modeling content collaborative hybrid and knowledge based recommender systems It presents theoretic research in the context of various applications from mobile

information access marketing and sales and web services to library and personalized TV recommendation systems This volume will serve as a basis to researchers who wish to learn more in the field of recommender systems and also to those intending to deploy advanced personalization techniques in their systems

on Artificial Intelligence and Cognitive Science which was held at the University of Ulster at Jordanstown Northern Ireland on 20-21 September 1990. The main aims of this annual conference are to promote AI research in Ireland, to provide a forum for the exchange of ideas amongst the different disciplines concerned with the study of cognition, and to provide an opportunity for industry to see what research is being carried out in Ireland and how they might benefit from the results of this research. Although most of the participants at the conference came from universities and companies within Ireland, a positive feature of the conference was the extent of interest shown outside of Ireland, resulting in participants from USA, Canada, Austria, and England. The keynote speakers were Professor David Chin, University of Hawaii, and Professor Derek Partridge, University of Exeter, and the topics included machine learning, AI tools and methods, expert systems, speech, vision, natural language reasoning with uncertain information, and explanation. The sponsors of the conference were Digital Equipment Co, Galway, and the Industrial Development Board for Northern Ireland.

Human-Computer Interaction - INTERACT '87 H.-J. Bullinger, B. Shackel, 2014-05-21. Since the first INTERACT Conference in September 1984, the field of Human-Computer Interaction has received increasing attention from researchers and industrial practitioners; the importance of the topic is now being widely recognized. Technological developments have made it possible to seek new solutions to the problem of supporting work processes by information technology and for designing the interface between user and the machine. Computers have become an everyday and common tool in the work of many people. This has motivated the development of an interdisciplinary field of research which now appears much more established than it was a few years ago. The INTERACT forums provide the opportunity for regular presentation and discussion of new results from research and application by bringing together the various disciplines and research approaches on a worldwide basis.
