**Computational Neuroendocrinology** Duncan J. MacGregor, Gareth Leng, 2016-03-03 Neuroendocrinology with its well defined functions inputs and outputs is one of the most fertile grounds for computational modeling in neuroscience But modeling is often seen as something of a dark art This book aims to display the power of modeling approaches in neuroendocrinology and to showcase its potential for understanding these complex systems A recurring theme in neuroendocrinology is rhythms How are rhythms generated and what purpose do they serve Are these two questions inextricably intertwined This book is written for innocents presuming no math beyond high school or computing beyond calculators It seeks to lead the curious into the thinking of the modeler providing the tools to the reader to understand models and even develop their own giving life to paper diagrams The diverse chapters from ion channels to networks systems and hormonal rhythms each tell the story of a model serving to join the hard won dots of experimentation mapping a new understanding and revealing hidden knowledge Written by a team of internationally renowned researchers Both print and enhanced e book versions are available Illustrated in full colour throughout This is the fourth volume in a new Series Masterclass in Neuroendocrinology a co publication between Wiley and the INF International Neuroendocrine Federation that aims to illustrate highest standards and encourage the use of the latest technologies in basic and clinical research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology Series Editors John A Russell University of Edinburgh UK and William E Armstrong The University of Tennessee USA Written by a team of internationally renowned researchers Both print and enhanced e book versions are available Illustrated in full colour throughout This is the fourth volume in a new Series Masterclass in Neuroendocrinology a co publication between Wiley and the INF International Neuroendocrine Federation that aims to illustrate highest standards and encourage the use of the latest technologies in basic and clinical research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology Series Editors John A Russell University of Edinburgh UK and William E Armstrong The University of Tennessee USA

**Scientific and Technical Aerospace Reports** ,1994     The Software Encyclopedia ,1997     *Modelling and Simulation* Louis G. Birta, Gilbert Arbez, 2007-09-07 This book provides a balanced and integrated presentation of modelling and simulation activity for both Discrete Event Dynamic Systems DEDS and Continuous Time Dynamic Systems CYDS The authors establish a clear distinction between the activity of modelling and that of simulation maintaining this distinction throughout The text offers a novel project oriented approach for developing the modelling and simulation methodology providing a solid basis for demonstrating the dependency of model structure and granularity on project goals Comprehensive presentation of the verification and validation activities within the modelling and simulation context is also shown

Computers, Control & Information Theory ,1978     **Advanced Dynamic-system Simulation** Granino A. Korn, 2007-03-07 Learn the latest techniques in programming sophisticated simulation systems This cutting edge text

presents the latest techniques in advanced simulation programming for interactive modeling and simulation of dynamic systems such as aerospace vehicles control systems and biological systems The author a leading authority in the field demonstrates computer software that can handle large simulation studies on standard personal computers Readers can run edit and modify the sample simulations from the text with the accompanying CD ROM featuring the OPEN DESIRE program for Linux and Windows The program included on CD solves up to 40 000 ordinary differential equations and implements exceptionally fast and convenient vector operations The text begins with an introduction to dynamic system simulation including a demonstration of a simple guided missile simulation Among the other highlights of coverage are Models that involve sampled data operations and sampled data difference equations including improved techniques for proper numerical integration of switched variables Novel vector compiler that produces exceptionally fast programs for vector and matrix assignments differential equations and difference equations Application of vector compiler to parameter influence studies and Monte Carlo simulation of dynamic systems Vectorized Monte Carlo simulations involving time varying noise derived from periodic pseudorandom noise samples Vector models of neural networks including a new pulsed neuron model Vectorized programs for fuzzy set controller partial differential equations and agro ecological models replicated at many points of a landscape map This text is intended for graduate level students engineers and computer scientists particularly those involved in aerospace control system design chemical process control and biological systems All readers will gain the practical skills they need to design sophisticated simulations of dynamic systems Note CD ROM DVD and other supplementary materials are not included as part of eBook file     Optimization in Control Applications Guillermo Valencia-Palomo, Francisco Ronay López-Estrada, 2019-01-10 This book is a printed edition of the Special Issue Optimization in Control Applications that was published in MCA     *Multimedia and Videodisc Compendium* ,1995     *CEP Software Directory* ,1998     **Government Reports Announcements & Index** ,1996-10     *Control of Metabolic Processes* Athel Cornish-Bowden, Maria Luz Cárdenas, 2013-11-22 THIS BOOK collects together papers given at a NATO Advanced Research Workshop held at Il Ciocco Lucca Italy from the 9th to the 15th April 1989 It sets out to present the current state of understanding of the principles governing the way fluxes and concentrations are maintained and controlled in metabolic systems Although this is a topic that has held the interest of biochemists for many years it is only quite recently that the methods of analysing the kinetics of multi enzyme pathways developed over the past two decades have come to be widely discussed or applied experimentally Many biochemists remain sceptical that the new methods offer a real advance except in complexity over the landmark discoveries of the 1950s and 1960s relating to inhibition of enzymes at branch points by the end products of metabolic pathways and the interpretation of allosteric effects and cooperativity Even those who have become convinced that the classical ideas provide only the starting point for understanding metabolic control have been by no means unanimous in their assessment of the direction in which one should advance In this book we have tried to include

all of the current points of view including the view that the classical theories tell us all that we need to know We have not seen it as our role as editors to paper over the cracks that exist and to pretend that we can speak to the world with one voice
