Beebe, 2017-11. *A Falconry Manual* is a comprehensive extensively updated version of his out of print book *Hawks, Falcons and Falconry* Hancock House 1976 and *The Compleat Falconer* Hancock House 1992. Drawing on over 50 years of field experience and research, Beebe presents an exhaustive summary of the behavior, capture and training of the birds of prey. It was Beebe's field studies and practical experience that led to his pioneering successes in breeding captive falcons in the early 1960s. His artistic talents not only contribute to the concise illustrations on how to capture and train birds but how to easily make all falconry hardware. One of the all-time best books for new Apprentices to learn about training a new hawk or falcon and one of the best-selling falconry books ever produced. *North American Falconry and Hunting Hawks* Frank

Lyman Beebe, 1989. *Hunting Tactics of Peregrines and Other Falcons* Dick Dekker, 2009. This book describes the foraging habits and capture rates of four species of bird-hunting falcons: Peregrine, Merlin, Gyrfalcon, and Prairie Falcon. Eight of the nine study areas were situated in western Canada in widely different habitats and the observation periods intermittently included all seasons over 44 years, 1965-2008. *Eleonora's Falcon* Harmut Walter, 1979-05. Named after a Sardinian princess of the fourteenth century who established laws protecting falcons, Eleonora's falcon is the only European bird to breed in autumn and feed its brood on the mass of birds that migrate from Europe to Africa between July and October. It breeds on small Mediterranean islands in colonies of up to 200 pairs and hunts often in groups preying on more than 90 species of migrant birds. During the winter, this falcon visits the rain-soaked woodlands of Madagascar. In this study, illustrated beautifully and extensively with 59 line drawings and 38 photographs, Hartmut Walter shows how the unique geographical and biological situation of *Falco eleonora* makes the species' health an important indicator of environmental decay. For though it lives in relatively isolated areas, Eleonora's falcon nevertheless may ingest the many pollutants contained in its diet of birds migrating from industrial Europe. Walter, who has studied raptors on several continents and has been an ornithologist since his early youth, examines several discrete colonies of Eleonora's falcon. He concentrates on the species' intraspecific behavior and ecology such as the falcons' aggressive actions, hunting strategies, and response to fluctuating environmental conditions and investigates their evolutionary past. **Australian Falcons** Stephen Debus, 2022-11-02.

The Peregrine Falcon Derek Ratcliffe, 2010-06-30 The first edition of The Peregrine Falcon was widely recognised as a classic of its kind documenting not only the species biology but also the sad tale of its decline due to the impact of pesticides This extensively revised and enlarged second edition takes full account of important new developments in the story of this bird during the intervening 12 years It reports one of the few notable successes in wildlife conservation the full restoration of British and Irish Peregrine populations and their appreciable recovery in other countries where numbers had also been greatly reduced by the impact of organochlorine pesticides The pattern of increase in Britain has been extremely varied from districts where numbers are now far higher than at any time in

recorded history to others where the bird is now at its lowest ebb The examination of the reasons for these differences helps us to understand the most recent developments in the Peregrine saga Particular attention has been paid to the recent major advances in our knowledge of Peregrine biology such as its movements population turnover food and nesting habits Many of the tables and figures have been revised and brought up to date so that this volume like its predecessor is once again by far the most detailed and readable reference on this most evocative of birds Donald Watson s colour paintings monochrome washes and line drawings and the original photographs illustrate the book as before Cover illustration by Donald Watson

Neotropical Birds of Prey David Whitacre, 2013-05-15 Until recently surprisingly little has been known about the biology and behavior of tropical forest raptors including such basic aspects as diets breeding biology habitat requirements and population ecology information critical to the development of conservation efforts The Peregrine Fund conducted a significant eight year long research program on the raptor species including owls in Tikal National Park in Guatemala to learn more about Neotropical birds of prey Impressive and unprecedented in scale this pioneering research also involved the development of new methods for detecting enumerating and studying these magnificent but often elusive birds in their forest home Beautifully illustrated with photographs of previously little known species the resulting book is the most important single source for information on the lowland tropical forest raptor species found in Central America Neotropical Birds of Prey covers twenty specific species in depth including the Ornate Hawk Eagle the Barred Forest Falcon the Bat Falcon and the Mexican Wood Owl offering thorough synopses of all current knowledge regarding breeding biology and behavior diet habitat use and spatial needs Contributors to this landmark work also show how the populations fit together as a community with overlapping habitat and prey needs that can put them in competition with reptiles and mammalian carnivores as well yet differ from one another in their nesting or feeding behaviors and population dynamics The work's substantive original data offer interesting comparisons between tropical and temperate zone species and provide a basis for establishing conservation measures based on firsthand research Making available for the first time new data on the biology ecology behavior and conservation of the majestic owls and raptors of the New World tropics this book will appeal to a wide ornithological readership especially the many raptor enthusiasts around the world

Behavioural Ecology of Western Palearctic Falcons

Giovanni Leonardi,2020-12-07 This monograph is the result of eight years of bibliographical and field research concerning several behavioural ecology aspects of the Palaearctic falcons For a while this book grew along with *The Lanner falcon* published in 2015 and revised in 2017 In both books the main aim was to provide a clear overview of the biology and ecology of these species In fact in the last 20 years the number of publications on falcons has grown tremendously and in parallel also those belonging to the so called grey literature The number of people involved is also increased by including both academics and nature lovers Many previously published books emphasized identification and offered little insights on the behavioural and ecological aspects of the species Very often the research on behavioural ecology remains closed within the confines of academic community By contrast a multitude of basic data is scattered in countless articles published in local magazines Many falcon species are easy to observe and study such as kestrels but others are more rare and localized In order to understand the survival strategies adopted by this group of avian predators it is necessary not to lose sight of the overall picture This book tries to explain the different survival strategies by examining through a few essential chapters some crucial aspects for all species The first chapter provides information on the genus *Falco* its genetics evolution and morphological peculiarities The other chapters deal with reproductive strategies competition exploitation of resources dispersal patterns communication and sociality One of the main objectives of this book is to produce an accessible but scholarly curated source of reference By understanding the most common species it is possible to provide a working framework for rarer and especially threatened falcon species
