Internet For The Radiology Practice:

The Internet for Radiology Practice Amit Mehta, 2007-11-23 The Internet is the ultimate amalgamation of the Information Age and the Communication Age. It is a technology that took 40 years to become an overnight sensation moving from the province of computer geeks to household utility in short order once it was discovered. We have gone from thinking a URL was a form of alien presence to viewing it as a natural footnote to business advertising. Like the Internet itself, interest in computing both local and distant has grown exponentially. Now grandmothers send e-mails to their stockbrokers, meals are planned and the groceries purchased across the Web, and music videos can be previewed or concert tickets purchased all with the help of the Internet. When our children come home from school, they are as likely to sign on to the Internet as they are to turn on the television. The Internet is a universal commodity for those with access.

Advanced Practice and Leadership in

Radiology Nursing Kathleen A. Gross, 2019-12-16 Endorsed by the Association of Radiologic and Imaging Nursing (ARIN), this first of a kind comprehensive radiology nursing textbook fills a gap by addressing important subjects for patient care and professional issues as well as future possibilities affecting nursing practice. It serves as a resource to related nursing specialties e.g. critical care, emergency or peri-anesthesia, and to radiologic technologists and physician assistants. The book could be used as one resource for studying for radiologic nursing certification. The textbook is subdivided into five sections that address advanced practice and leadership roles, clinical patient care topics, safety topics including legal considerations e.g. infection prevention and equipment. It includes a section with topics impacting the patient experience and a section on professional topics e.g. cybersecurity, social media, research outcomes, interprofessional collaboration, workplace violence, and current trends in imaging. The authors include advanced practice providers, radiology nurse managers, educators, physicians, a physicist, a dentist, attorneys, a child life specialist, administrators, and a social worker. Radiology diagnostic examinations and therapeutic procedures have become a more prominent part of patient care due to advances in technology and the ability of radiology to provide services that were traditionally done in surgery or not done because of limited knowledge. Many procedures are facilitated by the radiology nurse from initial consult to transfer to a hospital unit or discharge and follow up. Nurses assess, monitor, administer sedation, other medications, and respond to emergencies. They serve as educators, researchers, and resource personnel to the radiology department and in many instances to the entire facility. Radiology nurses are real leaders. In order to keep up to date on new developments, nurses need new literature to support their clinical expertise and leadership. This book is an unparalleled resource written by experts in their areas of interest.

Digital (R)Evolution in Radiology Walter Hruby, 2013-06-29 Three decades have passed since my first personal experiences influences and contacts with computer applications in the field of medicine These experiences were influenced by diverse presentations publications and seminars concerning various applications of information technology as early as in 1970 Univac International Executive Centre Rome The first clinical proposals and discussions during the first World Congress of Intensive Care Medicine London 1974 strongly impressed me since they demonstrated that the future of medicine would be changed rapidly by the use of computer technology In 1975 when I started my radiology residency my clinical and academic interests were focused on two major topics i interventional radiology and the clinical responsibility of the radiologist for the patient and ii the improvement of radiological services for both the clinician and the patient through the use of digital technology These two topics firstly interventional radiology and secondly computer technology along with all digital techniques developed in respect to examinations and modalities have been the basis for my personal evolution of medicine especially of digital radiology

Image-Based Teaching Tara Catanzano, 2022-10-28 This book offers detailed information on a variety of teaching techniques for radiology Generational differences in communication and adult learning theory have led to changes in educational content delivery Traditional didactic teaching methods are no longer embraced by students requiring educators to learn and adopt new techniques Radiologists currently in practice have little or no experience with these newer techniques some thrust upon them abruptly by the COVID pandemic In addition to practicing radiologists the

next generation of educators are currently in training and often do not receive instruction on educational theory and teaching techniques. It is incumbent upon members of the educational sphere to provide resources for these individuals. This work intends to provide just such a resource. The objectives of the book include: Explaining adult learning theory and brain friendly teaching; Describing teaching techniques to leverage brain friendly teaching; Reinforcing key points with links to online video based lectures as an accompaniment to the text. Topics covered across chapters include helping non teaching faculty to teach writing high quality MCQ questions and teaching quality safety and professionalism. Each chapter will have one key takeaway chart at the conclusion of the chapter with high yield key points highlighted in a bulleted format. This is an ideal guide for practicing radiologists including those not currently working in academic centers. Faculty in non academic centers can specifically benefit from chapters related to medical student, clinician and patient education. Future academic radiologists, i.e. fellows and residents, can benefit from the text as a foundation for careers in teaching hospitals and academic medical centers.

Settings Richard Wootton, 2015-04-24 Telemedicine networks to support healthcare workers in resource limited settings often for humanitarian purposes have evolved over the last decade or so in a largely autonomous way Communication between them has been informal and relatively limited in scope This situation could be improved by developing a comprehensive approach to the collection and dissemination of information A recent review identified seven telemedicine networks each of which had been in operation for at least five years and which provided store and forward telemedicine services to doctors in low and middle income countries These networks provide clinically useful services and improved healthcare access However like much of telemedicine the formal evidence for their cost effectiveness remains weak Topics of current research interest therefore include the cost effectiveness of telemedicine in resource limited settings Outcomes data and methods for gathering it such as patient quality of life following a telemedicine episode the knowledge gain of healthcare staff involved in telemedicine and staff recruitment and retention in rural areas are also of interest Finally there is little published information about the performance of these telemedicine networks and methods for measuring it about how best to manage them and about how to share resources between them A collection of articles reporting the current evidence supporting the use of telemedicine in resource limited settings would build the evidence base and should provide a focus for future research It would also serve to raise the profile of this potentially important research field
