Interoperating Geographic Information Systems:

Interoperating Geographic Information Systems Michael Goodchild, Max J. Egenhofer, Robin Fegeas, Cliff Kottman, 2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government *Interoperating Geographic Information Systems* Andrej Vckovski, Kurt E. Brassel, Hans-Jörg Schek, 2006-10-11 This book constitutes the refereed proceedings of the Second International Conference on Interoperating Geographic Information Systems INTEROP 99 held in Zurich Switzerland in March 1999 The volume presents 22 revised full papers carefully reviewed and selected for inclusion in the book Also included are three invited full papers The book addresses various topics of database interoperability and spatial data processing in particular identification infrastructure implementation vectors and graphics semantics heterogeneous databases and representation *Interoperating Geographic Information Systems* Andrej Vckovski, Kurt E. Brassel, Hans-Jörg Schek, 1999-03-04 This book constitutes the refereed proceedings of the Second International Conference on Interoperating Geographic Information Systems INTEROP 99 held in Zurich Switzerland in March 1999 The volume presents 22 revised full papers carefully reviewed and selected for inclusion in the book Also included are three invited full papers The book addresses various topics of database interoperability and spatial data processing in particular identification

infrastructure implementation vectors and graphics semantics heterogeneous databases and representation **ADVANCED GEOGRAPHIC INFORMATION SYSTEMS -Volume II**, 2009-09-19 Advanced Geographic Information Systems is a component of Encyclopedia of Earth and Atmospheric Sciences in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The content of the Theme on Advanced Geographic Information Systems is organized with state of the art presentations covering the following aspects of the subject Spatio Temporal Information Systems Interacting with GIS From Paper Cartography to Virtual Environments Spatial Data Management Topic Overview Introduction to Spatial Decision Support Systems GIS Interoperability from Problems to Solutions These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs **Integrated Spatial Databases: Digital Images and GIS** Peggy Agouris, Anthony Stefanidis, 2003-06-26 This book constitutes the thoroughly refereed post proceedings of the International Workshop on Integrated Databases Digital Images and GIS ISD 99 held in Portland Maine USA in June 1999 The 18 revised full papers presented went through a double reviewing process and were selected from nearly 40 original submissions The book is divided into parts on object extraction from raster images geospatial analysis formalisms and modeling and data access Geographic Information Systems in Oceanography and Fisheries Vasilis D. Valavanis, 2002-05-23 Over the last two decades there has been increasing recognition that problems in oceanography and fisheries sciences and related marine areas are nearly all manifest in the spatio temporal domain Geographical Information Systems GIS the natural framework for spatial data handling are being recognized as powerful tools with useful applications *Geographic Information Science* Max J. Egenhofer, David M. Mark, 2003-06-30 This book constitutes the refereed proceedings of the Second International Conference on Geographic Information Science GIScience 2002 held in Boulder Colorado USA in September 2002 The 24 revised full papers presented were carefully reviewed and selected from 64 paper submissions Among the topics addressed are Voronoi diagram representation geospatial database design vector data transmission geographic information retrieval geo ontologies relative motion analysis Web based maps information retrieval spatial pattern recognition environmental decision support systems multi scale spatial databases mobile journey planning searching geographical data indexing terrain modeling spatial allocation distributed geographic internet information systems and spatio thematic information programming **Interacting with Geospatial Technologies** Mordechai (Muki) Haklay, 2015-10-26 This book provides an introduction to HCI and usability aspects of Geographical Information Systems and Science Its aim is to introduce the principles of Human Computer Interaction HCI to discuss the special usability aspects of GIS which designers and developers need to take into account when developing such systems and to offer a set of tried and tested frameworks matrices and techniques that can be used within GIS projects Geographical Information Systems and other applications of computerised mapping have gained popularity in recent years Today computer

based maps are common on the World Wide Web mobile phones satellite navigation systems and in various desktop computing packages The more sophisticated packages that allow the manipulation and analysis of geographical information are used in location decisions of new businesses for public service delivery for planning decisions by local and central government Many more applications exist and some estimate the number of people across the world that are using GIS in their daily work at several millions However many applications of GIS are hard to learn and to master This is understandable as until quite recently the main focus of software vendors in the area of GIS was on the delivery of basic functionality and development of methods to present and manipulate geographical information using the available computing resources As a result little attention was paid to usability aspects of GIS This is evident in many public and private systems where the terminology conceptual design and structure are all centred around the engineering of GIS and not on the needs and concepts that are familiar to the user This book covers a range of topics from the cognitive models of geographical representation to interface design It will provide the reader with frameworks and techniques that can be used and description of case studies in which these techniques have been used for computer mapping application Re-Presenting GIS Peter Fisher,2005-11-01 Geographical information science is not merely a technical subject but also poses theoretical questions on the nature of geographic representation and whether there exist limits on the ability of GI systems to deal with certain objects and issues This book presents the debate surrounding technical GIS and theory of representation from an inside GIS perspective Chapters are authored by leading researchers from a range of fields including geographers planners ecologists and computer scientists from Europe and North America **Proceedings of the ... International Symposium on Advances in Geographic Information Systems** ,1999 *Qualitative GIS* Meghan Cope,Sarah Elwood,2009-07-09 Geographic Information Systems are an essential tool for analyzing and representing quantitative spatial data *Qualitative GIS* explains the recent integration of qualitative research with Geographical Information Systems With a detailed contextualising introduction the text is organised in three sections Representation examines how researchers are using GIS to create new types of representations working with spatial data maps and other visualizations to incorporate multiple meanings and to provide texture and context Analysis discusses the new techniques of analysis that are emerging at the margins between qualitative research and GIS this in the wider context of a critical review of mixed methods in geographical research Theory questions how knowledge is produced showing how ideas of science and truth inform research and demonstrates how qualitative GIS can be used to interrogate discussions of power community and social action Making reference to representation analysis and theory throughout the text shows how to frame questions collect data analyze results and represent findings in a truly integrated way An important addition to the mixed methods literature *Qualitative GIS* will be the standard reference for upper level students and researchers using qualitative methods and Geographic Information Systems *Interoperating Geographic Information Systems* Andrej Vckovski,Kurt E.
