Bibliography Pierre Villars, Karin Cenzual, Marinella Penzo, 2012-12-21 By browsing about 10 000 000 scientific articles of over 200 major journals mainly in a cover to cover approach some 200 000 publications were selected The extracted data is part of the following fundamental material research fields crystal structures S phase diagrams also called constitution C and the comprehensive field of intrinsic physical properties P This work has been done systematically starting with the literature going back to 1900 The above mentioned research field codes S C P as well as the chemical systems investigated in each publication were included in the present work The aim of the Inorganic Substances Bibliography is to provide researchers with a comprehensive compilation of all up to now published scientific publications on inorganic systems in only three handy volumes *Lithium Niobate Crystals* I. Sergeevich Kuz'minov, 1999 Lithium niobate crystals have a number of unique properties Lithium niobate is at the same time a ferroelectric piezoelectric pyroelectric and has high nonlinearly optical and electro optical coefficients and photorefractive sensitivity These properties enable these crystals to be used widely in optical and acoustic devices and photorefractive sensitivity enhanced by doping with transitional metals offers new possibilities of using lithium niobate as a recording holographic medium These properties are determined by the crystal structure of lithium niobate sensitive to physical and chemical effects Special attention is given in the book to physico chemical features of technology disruption of stoichiometry in these crystals and detection of this disruption by physical

methods At the same time the ideas and methods proposed in the book can be used in technology of other crystals
