S. Elton, 2012-12-06 THE ECOLOGICAL SURVEY on which this book is based began to be planned in 1942 and since 1945 has been mainly centred upon Oxford University's estate at Wytham Woods where a rich series of habitats from open ground and limestone to woodland with many springs and marshes interspersed occupies a hill set in riverine surroundings Here biological research workers from the University have accumulated a considerable body of knowledge some of which I have arranged in a general setting that allows one to comprehend some of the inter related parts of the whole system It is also intended to provide a framework for understanding animal communities elsewhere The ecological inquirer is more than most scientific people apt to find himself lost in a large labyrinth of interrelations and variables The dictionary defines a labyrinth as an intricate structure of inter communicating passages through which it is difficult to find one's way without a clue This could equally be a figurative description of plant and animal communities The present book seeks to provide a plan of construction of the labyrinth and a few new clues that may help the inquirer to know

where he is on the general ecological map In presenting this blue print of animal communities I have avoided giving long lists of species such as the botanist with his smaller kingdom can handle fairly well **Epigenetics** Joel D. Wallach, Ma Lan, Gerhard N.
