Contemporary Physics Plays Jenni G. Halpin, 2018-04-12 This book analyzes recent physics plays arguing that their enactment of concepts from the sciences they discuss alters the nature of the decisions made by the characters changing the ethical judgements that might be cast on them Recent physics plays regularly alter the shape of space time itself drawing together disparate moments reversing the flow of time creating apparent contradictions and iterating scenes for multiple branches of counterfactual history With these changes both causality and responsibility shift variously The roles of iconic scientists such as Albert Einstein and Werner Heisenberg are interrogated for their dramatic value placing history and dramatic license in tension Cold War strategies and the limits of espionage highlight the emphatically personal involvement of ordinary individuals This study is vital reading for those interested in physics plays and the relationship between the sciences and the humanities

Barad, 2007-07-11 *Meeting the Universe Halfway* is an ambitious book with far reaching implications for numerous fields in the natural sciences social sciences and humanities In this volume Karen Barad theoretical physicist and feminist theorist elaborates her theory of agential realism Offering an account of the world as a whole rather than as composed of separate natural and social realms agential realism is at once a new epistemology ontology and ethics The starting point for Barad's analysis is the philosophical framework of quantum physicist Niels Bohr Barad extends and partially revises Bohr's philosophical views in light of current scholarship in physics science studies and the philosophy of science as well as feminist poststructuralist and other critical social theories In the process she significantly reworks understandings of space time matter causality agency subjectivity and objectivity In an agential realist account the world is made of entanglements of social and natural agencies where the distinction between the two emerges out of specific intra actions Intra activity is an inexhaustible dynamism that configures and reconfigures relations of space time matter In explaining intra activity Barad reveals questions about how nature and culture interact and change over time to be fundamentally misguided And she

reframes understanding of the nature of scientific and political practices and their interrelationship. Thus she pays particular attention to the responsible practice of science and she emphasizes changes in the understanding of political practices critically reworking Judith Butler's influential theory of performativity. Finally Barad uses agential realism to produce a new interpretation of quantum physics demonstrating that agential realism is more than a means of reflecting on science; it can be used to actually do science.

*Narrative Ethics* Jakob Lothe, 2013-09-01 While Plato recommended expelling poets from the ideal society, W. H. Auden famously declared that poetry makes nothing happen. The 19 contributions to the present book avoid such polarized views and responding in different ways to the ethical turn in narrative theory explore the varied ways in which narratives encourage readers to ponder matters of right and wrong. All work from the premise that the analysis of narrative ethics needs to be linked to a sensitivity to esthetic narrative form. The ethical issues are accordingly located on different levels. Some are clearly presented as thematic concerns within the text's considered while others emerge through or are generated by the presentation of character and event by means of particular narrative techniques. The objects of analysis include such well known or canonical texts as Biblical Old Testament stories, Mark Twain's *Huckleberry Finn*, J. R. R. Tolkien's *The Lord of the Rings*, Vladimir Nabokov's *Lolita*, Jonathan Littell's *The Kindly Ones*, Ann Radcliffe's *The Italian*, and Matthew Lewis's *The Monk*. Others concentrate on less well known texts written in languages other than English. There are also contributions that investigate theoretical issues in relation to a range of different examples.

**The Proof Stage** Stephen Abbott, 2023-07-11 How playwrights from Alfred Jarry and Samuel Beckett to Tom Stoppard and Simon McBurney brought the power of mathematics to life on the stage. The discovery of alternate geometries, paradoxes of the infinite, incompleteness, and chaos theory revealed that despite its reputation for certainty, mathematical truth is not immutable, perfect, or even perfectible. Beginning in the last century, a handful of adventurous playwrights took inspiration from the fractures of modern mathematics to expand their own artistic boundaries. Originating in the early avant-garde, mathematics infused theater reached a popular apex in Tom Stoppard's 1993 play *Arcadia*. In *The Proof Stage*, mathematician Stephen Abbott explores this unlikely collaboration of theater and mathematics. He probes the impact of mathematics on such influential writers as Alfred Jarry, Samuel Beckett, Bertolt Brecht, and Stoppard, and delves into the life and mathematics of Alan Turing as they are rendered onstage. The result is an unexpected story about the mutually illuminating relationship between proofs and plays from Euclid and Euripides to Gödel and *Godot*. Theater is uniquely poised to discover the soulful human truths embedded in the austere theorems of mathematics, but this is a difficult feat. It took Stoppard twenty-five years of experimenting with the creative possibilities of mathematics before he succeeded in making fractal geometry and chaos theory integral to *Arcadia*'s emotional arc. In addition to charting Stoppard's journey, Abbott examines the post-*Arcadia* wave of ambitious works by Michael Frayn, David Auburn, Simon McBurney, Snoo Wilson, John Mighton, and others. Collectively, these gifted playwrights transform the great philosophical upheavals of mathematics into profound and sometimes poignant revelations about the

human journey
