International Regimes For The Final Frontier:

International Regimes for the Final Frontier M. J. Peterson, 2006-06-01 Examines the negotiations between nations that lead to international agreements regulating human activity in outer space [International Regimes for the Final Frontier](#)

M. J. Peterson, 2012-02-01 Neither rational choice theory with its emphasis on interest calculation nor sociological institutionalist theory with its emphasis on identity defined rule following indicates how governments determine which of their multiple interests or identities are at stake in a particular situation or how they develop mutual comprehension of each other's goals International Regimes for the Final Frontier addresses these gaps by tracing how governments approach an unfamiliar issue in this case international agreements regulating human activity in outer space between 1958 and 1988 and examines three ways situation definitions channel governments approaches to issues or problems *US National*

Cybersecurity Damien Van Puyvelde, Aaron Brantly, 2017-07-20 This volume explores the contemporary challenges to US national cybersecurity Taking stock of the field it features contributions by leading experts working at the intersection between academia and government and offers a unique overview of some of the latest debates about national cybersecurity These contributions showcase the diversity of approaches and issues shaping contemporary understandings of cybersecurity in the West such as deterrence and governance cyber intelligence and big data international cooperation and public private collaboration The volume's main contribution lies in its effort to settle the field around three main themes exploring the international politics concepts and organization of contemporary cybersecurity from a US perspective Related to these themes this volume pinpoints three pressing challenges US decision makers and their allies currently face as they attempt to govern cyberspace maintaining international order solving conceptual puzzles to harness the modern information environment and coordinating the efforts of diverse partners The volume will be of much interest to students of cybersecurity defense studies strategic studies security studies and IR in general **Identity and Institutions** Neal G. Jesse, Kristen P.

Williams, 2012-02-01 How can conflicts between various nationalist ethnic groups be reduced Combining theory with case studies of Spain and Ireland Neal G. Jesse and Kristen P. Williams develop an argument favoring a solution that links resolving issues of identity and perceptions of inequality to the establishment of cross national democratic institutions These institutions can affect deeply held attitudes by promoting overlapping identities and pooling sovereignty Overlapping identities reduce tension by creating an atmosphere where different ethnic groups lose their strict definitions of Self and Other Pooling sovereignty across a number of international and national representative bodies leads to increased access to governmental policymaking for all parties involved with each nationalist ethnic group having a stake in government Increased access moreover reduces threat perceptions and ethnic security dilemmas and increases trust all of which play an important role in overcoming such conflicts *Theorizing European Space Policy* Thomas C. Hoerber, Emmanuel Sigalas, 2016-11-10 In the modern world technical issues define space policy Missing from discussions of space policy

however is a consideration of the political consequences of new space endeavors particularly in the context of the European Union This book therefore approaches space policy instead from the discipline of European studies and analyzes the European integration process through the lenses of political science history economics and international relations The strengths of each discipline are used to apply theoretical approaches to current issues in European space policy Theorizing European Space Policy is the latest contribution to the growing debate on space policy and its role in the European integration process

State Accountability for Space Debris Peter Stubbe, 2017-11-13 In State Accountability for Space Debris Peter Stubbe examines the legal consequences of space debris pollution which he argues is a global environmental concern The study finds that the customary no harm rule and Article IX of the Outer Space Treaty obligate States to prevent the generation of debris and that the international community as a whole has a legitimate interest in their compliance A breach of these obligations entails the responsibility of a State and compensation must be provided for damage caused by space debris The author treats responsibility and liability separately and thoroughly scrutinizes both legal regimes with the help of common analytical elements Finally Peter Stubbe argues that a comprehensive traffic management system is required so as to ensure the safe and sustainable use of outer space

International Cooperation Against All Odds Mai'a K. Davis Cross, 2023-10-19 International Cooperation Against All Odds The Ultrasocial World recasts how we understand international relations through an examination of how the human evolutionary predisposition to be ultrasocial as a species impacts which political ideas succeed transform manipulate and inspire on a global scale At a time when pessimism about our current world order is at an all time high this book overturns widespread assumptions that international relations is mainly about conflict power and national self interest In the last 10 20 years scientists have discovered that as a species we are biologically hard wired soft wired and pre wired to be other regarding and cooperative Humans are an ultrasocial species and yet this predisposition is completely ignored in governments across the world Political leaders experts and the media have cultivated a myopic vision of global conflict feeding an obsession on crises of the moment rather than recognizing frequent and significant breakthroughs in peaceful cooperation and overall trends in the decline of violence This book shows how time and time again our ultrasocial predisposition has pushed us towards big ideas that inspire and bring us together around the power of possibility Featuring original research on international cooperation in outer space exploration European Union integration nuclear weapons and climate change among other examples Mai a K Davis Cross shows ultrasociality at work in a range of contexts Tracing the path from social neuroscience and evolutionary biology among others to the power of ideas to international agreements International Cooperation Against All Odds opens up an entirely new understanding of world politics If we recognize our nature as a species and the potential we have to work together we can start to transform institutions and devise policies that take advantage of this The book ends with a roadmap to promote

more international cooperation and eventually a more stable peaceful world order

Indian Ocean Region Manoj Gupta, 2010-08-09 It is a privilege to introduce the reader to this book as I believe that it will make a significant contribution to given the difficulties in the knowledge of the Indian Ocean developing cooperation in the Indian Ocean region There have been numerous failed efforts at regional cooperation in different fora in the Indian Ocean As a result of the land based orientation of the people in the region the importance for countries to develop the power to govern the sea has largely been ignored The maritime approach taken by Manoj Gupta to the Indian Ocean as a region in international relations offers a timely and critical assessment of the potential for regional cooperation and ocean governance The political leadership in the region can no longer ignore the need for cooperation in maritime affairs in the Indian Ocean This book enriches the literature on Indian Ocean issues as it argues convincingly that the security of nations economic well being of the people and health of the Indian Ocean cannot be divested from one another All are fundamentally dependant on the ability of the countries in the region to individually and collectively exert the power to govern the sea

The Multi-Governance of Water Matthias Finger, Ludivine Tamiotti, Jeremy Allouche, 2012-02-01 As the governance of transboundary rivers becomes a subject of growing importance due to the increasing pressure on freshwater resources this timely collection examines water scarcity and efforts to better manage rivers and river basins Most specialists agree that states face many institutional inadequacies when dealing with shared resources and that new governance mechanisms are needed to improve water management Using case studies of the Aral Sea basin and the Danube Euphrates and Mekong river basins the contributors develop a new approach to water governance the concept of multi governance an effort to collectively solve public problems by involving a series of relevant actors from the local to the global level such as institutions states civil society and business

The Law and Politics of International Regime Conflict Dirk Pulkowski, 2014-02-13 The international order is constituted by a plurality of international regimes institutionalized arrangements in different issue areas that possess their own norms and procedures The present book examines how conflict among regimes may arise and probes the role that international law can play in managing such conflict Throughout the book the example of trade in cultural products is used to illustrate the evolution of regime conflict and the potential for its management Conflicts between the goals of free trade and cultural diversity have notably surfaced within the World Trade Organization WTO and the United Nations Educational Scientific and Cultural Organization UNESCO As a result there is a potential for conflict among WTO law the UNESCO's Convention on the Protection and Promotion of the Diversity of Cultural Expressions and human rights The book posits that three dimensions are characteristic for regime conflict First regime conflict is a function of conflict among different social goals or values Second such goal conflicts are institutionalized through the interaction of a variety of political actors struggling for influence often in intergovernmental organizations Third regime conflict may manifest itself in conflicts of legal rules If a state acts in conformity with the rules of one regime its conduct may trigger a violation of the rules of another regime The author argues

that while international law cannot be construed as a fully integrated and unified system it does provide a common language for different regimes to engage with each other The shared discourse rules of international law enable a degree of coordination of the policies of different regimes notably through techniques of interpretation and legal priority rules International law contributes to the management of regime conflict by providing commonly accepted reasons for choosing among competing policy goals

Outer Space Development, International Relations and Space Law Edythe Weeks, 2013-02-21

It is the eve of outer space development but few people are aware of this In the absence of awareness people cannot prepare for the opportunities that will arise and so the vast wealth likely to flow to Earth from outer space will cause ever greater inequality and instability in our already unequal and unstable world This book is a call to educators to factor equality and diversity into the process of outer space development by creating a widespread movement to teach outer space development studies to all students especially those who study social and behavioral sciences In calling for this the author is also putting out a call to visionary thinkers to increase public awareness that outer space is already in the process of being developed Her objective is to provide a pedagogical approach aimed at mending the knowledge gap If we fail in this objective we are more likely than ever before to witness ever widening gaps of social and financial inequality The first question that will arise as we embark on this process of course will be Why outer space development People often ask where the money will come from to develop outer space Platinum group metals such as iridium and osmium and various other valuable untapped natural resources have been discovered in abundant quantities and are likely to be mined by companies The discovery of natural resources has sparked development projects in the past These historical patterns of human behavior are occurring again today as companies speed up the process of private spaceship development A myriad of space laws and policies are already in place to support space commercialization Recently the 2010 NASA Authorization Act and various other laws and policies initiated by the US government have placed on the agenda plans to build advanced space transportation systems to privatize spacecraft development to create commercial space habitats space stations and space settlements to initiate commercial space mining to investigate spacecraft trajectory optimization for landing on near Earth asteroids to engage in commercial spaceport construction and interstellar interplanetary international telecommunications and to launch space exploration missions to near Earth asteroids the Moon Mars and Mars's moons US initiatives have in the past been mirrored by the international community and we can expect to see similar patterns arising on a global scale indeed as this book will demonstrate they already are The global community is experiencing economic recession natural disasters lack of opportunity employment anxiety failing K 12 programs widening inequality gaps uprisings revolutions revolts unmet educational goals and a general failure to uplift inspire and provide meaningful opportunities for significant portions of our population People need something that will allow them to focus anew their talents energies abilities and gifts and use this bleak climate as an opportunity for positive change Outer space development is emerging as an answer to this state of crisis

The question is To whom will the benefits accrue Many strategic decisions have already been taken regarding space development of which the global general public is unaware Once legal rights to space resources are granted only those with the capital to take advantage of new laws and policies will be in a position to profit from the new space industries Only those who are in a position to know about outer space development will be in position to take advantage of the opportunities It is important to remember that the global general public has for several decades been paying the start up costs for space exploration research science and technology It is not too late to factor in equality before an infrastructure of inequality is forever with us as we venture to establish the final frontier

International Cooperation When Mistrust Deepens Perri 6, Eva Heims, 2025-01-16 In the years leading up to the outbreak of war in 1914 Britain was collaborating closely with Germany on the development of an improved telegraph service despite preparations for war also being made by both countries This cooperation rested upon both states intensive participation in the global regulatory regime for telecommunications Why states commit to cooperating in such multilateral regimes with other states while their relationship struggles with deepening mistrust is a longstanding puzzle As tensions rise among great powers today and international organisations struggle again this puzzle is as important now as it was when international regulatory regimes first emerged The book challenges many of the conventional explanations for this puzzling situation and draws on neo Durkheimian institutional theory to develop a novel explanation It examines the case of Britain's relationship with the first global regulatory regime which was concerned with international telegraphy submarine telegraph cables and radiotelegraphy from the 1860s through to 1914 The regime was created in a time of European wars and growing imperial conflicts Although Britain seriously contemplated leaving the International Telegraph Union in 1901 the state went on to deepen cooperation with other countries in telegraphy including with Germany even as preparations for war advanced Drawing on extensive archival sources Perri 6 and Eva Heims show that social organisation in government can cultivate institutional buffering between aspects of external policy which can sustain commitment despite deepening conflict In doing so they show how a neo Durkheimian approach provides a powerful explanation for deepening cooperation even as mistrust rises which has significant implications for understanding state formation

The Global Commons Susan J. Buck, 2017-09-25 Antarctica the high seas and deep seabed the atmosphere and space are increasingly accessible and exploited resource domains Collectively known as the global commons they represent a new and profound challenge for international law and institutions In *The Global Commons* Susan Buck considers the unique physical legal management and policy problems associated with these areas The book is a clear useful introduction to the subject that will be of interest to general readers as well as to students in international relations international law and environmental law and policy

European Integration and Space Policy Thomas Hoerber, Antonella Forganni, 2020-12-21 This volume addresses developments in European space policy and its significance for European integration using discourse theory as a framework It seeks to address the

developments in European space policy by examining several sensitive security questions linked in general with space activities on the one hand and the interplay between space policy and security policy in the European Union EU on the other. The book argues that defence and security matters should be studied for a better understanding of space projects in their historical political economic legal and social context. The volume seeks to answer the following key questions: What can space policy contribute to European identity formation and the integration process? What are the interests of member states? EU institutions in space? How is space policy perceived by European institutions and how have they been engaged in the policy process to promote activity in space? In which ways is the EU engaged in space in terms of policy areas e.g. foreign policy industrial policy security and defence policies? What is the impact of institutions on the policy making process in European space policy? This book will be of interest to students of EU policy space policy discourse studies and International Relations in general.

Space Policy in Developing Countries Robert C. Harding, 2013. This book analyses the rationale and history of space programs in countries of the developing world. Space was at one time the sole domain of the wealthiest developed countries. However, the last couple of decades of the twentieth century and the first decade of the twenty first century have witnessed the number of countries with state supported space programs blossom. Today no less than twenty five developing states including the rapidly emerging economic powers of Brazil seventh largest China second largest and India fourth largest possess active national space programs with already proven independent launch capability or concrete plans to achieve it soon. This work places these programs within the context of international relations theory and foreign policy analysis. The author categorizes each space program into tiers of development based not only on the level of technology utilised but on how each fits within the country's overall national security and or development policies. The text also places these programs into an historical context which enables the author to demonstrate the logical thread of continuity in the political rationale for space capabilities generally. This book will be of much interest to students of space power and politics development studies strategic studies and international relations in general.

Rare Earth Frontiers Julie M. Klinger, 2018-01-15. *Rare Earth Frontiers* is a work of human geography that serves to demystify the powerful elements that make possible the miniaturization of electronics green energy and medical technologies and essential telecommunications and defense systems. Julie Michelle Klinger draws attention to the fact that the rare earths we rely on most are as common as copper or lead and this means the implications of their extraction are global. Klinger excavates the rich historical origins and ongoing ramifications of the quest to mine rare earths in ever more impossible places. Klinger writes about the devastating damage to lives and the environment caused by the exploitation of rare earths. She demonstrates in human terms how scarcity myths have been conscripted into diverse geopolitical campaigns that use rare earth mining as a pretext to capture spaces that have historically fallen beyond the grasp of centralized power. These include legally and logistically forbidding locations in the Amazon Greenland and Afghanistan and on the Moon. Drawing on ethnographic archival and interview data

gathered in local languages and offering possible solutions to the problems it documents this book examines the production of the rare earth frontier as a place a concept and a zone of contestation sacrifice and transformation *The Yale Journal of International Law* ,2004 **Elgar Concise Encyclopedia of Space Law** Mahulena Hofmann,P. J. Blount,2025-01-09 Providing a comprehensive and timely overview of the evolving landscape of space law this Encyclopedia emphasises the importance of international collaboration in maintaining outer space as a peaceful domain It illustrates how the demise of the bipolar world order changed the paradigm of international legal developments in outer space activities whilst the need to guarantee the security safety and sustainability of space remained unchanged The International Politics of Space Michael Sheehan,2007-10-15 This book examines the interaction of international politics and space using case studies and various theoretical approaches to international relations
