Lions, 1979-01-01 **Monographic Series** Library of Congress, **Computer Aided Design in Control Systems 1988** Zhen-Yu Chen, 2017-05-03 This volume contains 73 papers presenting the state of the art in computer aided design in control systems CADCS The latest information and exchange of ideas presented at the Symposium illustrates the development of computer aided design science and technology within control systems The Proceedings contain six plenary papers and six special invited papers and the remainder are divided into five themes CADCS packages CADCS software and hardware systems design methods CADCS expert systems CADCS applications with finally a discussion on CADCS in education and research Operator Methods for Optimal Control Problems Whei-Mei Lee, 1987-08-31

**Discrete Event Systems, Manufacturing Systems, and Communication Networks** P.R. Kumar, P.P. Varaiya, 2012-12-06 This IMA Volume in Mathematics and its Applications DISCRETE EVENT SYSTEMS MANUFACTURING SYSTEMS AND COMMUNICATION NETWORKS is based on the proceedings of a workshop that was an integral part of the 1992-93 IMA program on Control Theory The study of discrete event dynamical systems DEDS has become rapidly popular among researchers in systems and control in communication networks in manufacturing and in distributed computing This development has created problems for researchers and potential consumers of the research The first problem is the veritable Babel of languages formalisms and approaches which makes it very difficult to determine the commonalities and distinctions among the competing schools of approaches The second related problem arises from the different traditions

paradigms values and experience that scholars bring to their study of DEDS depending on whether they come from control communication computer science or mathematical logic As a result intellectual exchange among scholars becomes compromised by unexplicated assumptions The purpose of the Workshop was to promote exchange among scholars representing some of the major schools of thought in DEDS with the hope that 1 greater clarity will be achieved thereby and 2 cross fertilization will lead to more fruitful questions We thank P R Kumar and P P Varaiya for organizing the workshop and editing the proceedings We also take this opportunity to thank the National Science Foundation and the Army Research Office whose financial support made the workshop possible A vner Friedman Willard Miller Jr     System Identification R. Isermann,2014-05-23 System Identification is a special section of the International Federation of Automatic Control IFAC Journal Automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification Topics include modeling and identification step response and frequency response methods correlation methods least squares parameter estimation and maximum likelihood and prediction error methods After analyzing the basic ideas concerning the parameter estimation methods the book elaborates on the asymptotic properties of these methods and then investigates the application of the methods to particular model structures The text then discusses the practical aspects of process identification which includes the usual general procedures for process identification selection of input signals and sampling time offline and on line identification comparison of parameter estimation methods data filtering model order testing and model verification Computer program packages are also discussed This compilation of tutorial papers aims to introduce the newcomers and non specialists in this field to some of the basic methods and procedures used for system identification     Nonlinear Time-discrete Systems M. Gössel,2006-04-11     *Piecewise Affine Control: Continuous-Time, Sampled-Data, and Networked Systems* Luis Rodrigues,Behzad Samadi,Miad Moarref,2019-11-06 Engineering systems operate through actuators most of which will exhibit phenomena such as saturation or zones of no operation commonly known as dead zones These are examples of piecewise affine characteristics and they can have a considerable impact on the stability and performance of engineering systems This book targets controller design for piecewise affine systems fulfilling both stability and performance requirements The authors present a unified computational methodology for the analysis and synthesis of piecewise affine controllers taking an approach that is capable of handling sliding modes sampled data and networked systems They introduce algorithms that will be applicable to nonlinear systems approximated by piecewise affine systems and they feature several examples from areas such as switching electronic circuits autonomous vehicles neural networks and aerospace applications Piecewise Affine Control Continuous Time Sampled Data and Networked Systems is intended for graduate students advanced senior undergraduate students and researchers in academia and industry It is also appropriate for engineers working on applications where switched linear and affine models are important     Augmented Lagrangian Methods M. *Augmented Lagrangian and Operator-splitting Methods in Nonlinear Mechanics* Ronald Glowinski,Patrick Le Tallec,1989-01-01 A need for a deeper understanding of the convergence properties of augmented Lagrangian algorithms and of their relationship to operator splitting methods such as alternating methods direction and the development of more efficient algorithms prompted the authors to write this book The volume is oriented to applications in continuum mechanics This volume deals with the numerical simulation of the behavior of continuous media by augmented Lagrangian and operator splitting methods coupled to finite element approximations It begins with a description of the mechanical and mathematical frameworks of the considered applications as well as a general analysis of the basic numerical methods additionally used to study them These ideas are then applied to specific classes of mechanical problems      Applied Mechanics Reviews ,1980

**Library of Congress Catalogs** Library of Congress,1982      Lectures on Embedded Systems Grzegorz Rozenberg,Frits W. Vaandrager,1998-10-14 This volume originates from the School on Embedded Systems held in Veldhoven The Netherlands in November 1996 as the first event organized by the European Educational Forum Besides thoroughly reviewed and revised chapters based on lectures given during the school additional papers have been solicited for inclusion in the present book in order to complete coverage of the relevant topics The authors adress professionals involved in the design and management of embedded systems in industry as well as researchers and students interested in a competent survey The book will convince the reader that many architectural and algorithmic problems in the area of embedded systems have well documented optimal or correct solutions notably in the fields of real time computing distributed computing and fault tolerant computing
