Space Policy in Developing Countries Robert C. Harding, 2013. This book analyses the rationale and history of space programs in countries of the developing world. Space was at one time the sole domain of the wealthiest developed countries. However, the last couple of decades of the twentieth century and the first decade of the twenty-first century have witnessed the number of countries with state-supported space programs blossom. Today no less than twenty-five developing states, including the rapidly emerging economic powers of Brazil (seventh largest), China (second largest) and India (fourth largest), possess active national space programs with already proven independent launch capability or concrete plans to achieve it soon. This work places these programs within the context of international relations theory and foreign policy analysis. The author categorizes each space program into tiers of development based not only on the level of technology utilised but on how each fits within the country's overall national security and/or development policies. The text also places these programs into an historical context which enables the author to demonstrate the logical thread of continuity in the political rationale for space capabilities generally. This book will be of much interest to students of space power and politics, development studies, strategic studies and international relations in general.

Space Politics and Policy E. Sadeh, 2006-04-11. **Space Politics and Policy: An Evolutionary Perspective** provides a comprehensive survey of Space Policy. This book is organized around two themes. Space Policy is evolutionary in that it has responded to dramatic political events such as the launching of Sputnik and the Cold War and has undergone dynamic and evolutionary policy changes over the course of the space age. Space Policy is an integral part of and interacts with public policy processes in the United States and abroad. The book analyzes Space Policy at several levels including historical context, political actors and institutions, political processes and policy outcomes. It examines the symbiotic relationships between policy, technology and science, provides a review and synthesis of the existing body of knowledge in Space Policy and identifies Space Policy trends and developments from the beginnings of the space age through the current era of the twenty-first century.

Chinese Space Policy Roger Handberg, Zhen Li, 2006-11-29. This volume explains the beginnings and expansion of China's space program, analyzing how China is now able to hold such ambitions and how the interaction between technology, politics

and economics has influenced the Chinese space program It opens by tracing out the earlier development of the space program and identifying the successes and problems that plagued this initial effort later focusing upon its development over the past decade and into the future As China is now able to reach into outer space with its machines and since 2003 with its humans the authors examine how this move from a non participant status to a state operating at the highest level of space activities has confirmed its potential place as the new economic and military superpower of the twenty first century They also demonstrate how recent successes mean that China is now confronted by an issue previously encountered by other space powers such as the United States and the former Soviet Union what is the value of the space program given its high costs and likelihood of dramatic failure Chinese Space Policy will be of great interest to students of space studies Chinese politics security studies and international relations in general
