Microbial Technology for Sustainable E-waste Management Prasenjit Debbarma,Saurabh Kumar,Deep Chandra Suyal,Ravindra Soni,2023-03-01 This book besides

discussing challenges and opportunities will reveal the microbe metal interactions and strategies for e waste remediation in different ecosystems It will unveil the recent biotechnological advancement and microbiological approach to sustainable biorecycling of e waste such as bioleaching for heavy metal extraction valorization of precious metal biodegradation of e plastic the role of the diverse microbial community in e waste remediation genetically engineered microbes for e waste management the importance of microbial exopolysaccharides in metal biosorption next generation technologies omics based technologies etc It also holds the promise to discuss the conservation utilization and cataloging indigenous microbes in e waste polluted niches and promising hybrid technology for sustainable e waste management Revolution in the area of information technology and communication is constantly evolving due to scientific research and development Concurrently the production of new electrical and electronic equipment also thus uplifting in this era of revolution These technological advancements certainly have problematic consequences which is the rise of huge amounts of electronic obsolesces or electronic waste e waste Improper management of both hazardous and nonhazardous substances of e waste led to a major concern in our digital society and environment Therefore a sustainable approach including microbial candidates to tackle e waste is the need of the hour Nevertheless the continuous demand for new generation gadgets and electronics set this high tech evolution to a new frontier in the last few years With this continuing trend of technological development e waste is expanding exponentially worldwide In the year of 2019 the worldwide generation of e waste was approximately 53.6 Mt of which only about 17.4% of e waste was collected and recycled and the other 82.6% was not even documented E waste contains various heterogeneous waste complexes such as metals 60% blends of many polymers 30% and halogenated compounds radioactive elements and other pollutants 10% respectively The sustainable efficient and economic management of e waste is thus a challenging task today and in the coming decades Conventional techniques such as the use of chemicals incineration and informal ways of e waste dismantling trigger serious health risks and contamination to the human population and environment respectively due to the liberation of toxic and hazardous substances from the waste In this context bio candidates especially microorganisms could be sharp edged biological recycling tools to manage e waste sustainably As microbes are omnipresent and diverse in their physiology and functional aspects they offer a wide range of bioremediation
