Research Handbook on the Law of Virtual and Augmented Reality Woodrow Barfield, Marc Jonathan Blitz, 2018-12-28 Virtual and augmented reality raise significant questions for law and policy When should virtual world activities or augmented reality images count as protected First Amendment speech and when are they instead a nuisance or trespass When does copying them infringe intellectual property laws When should a person or computer face legal consequences for allegedly harmful virtual acts The Research Handbook on the Law of Virtual and Augmented Reality addresses these questions and others drawing upon free speech doctrine criminal law issues of data protection and privacy legal rights for increasingly intelligent avatars and issues of jurisdiction within virtual and augmented reality worlds **The Law of Contributory Liability on the Internet** Berrak Genç-Gelgeç, 2022-01-10 This book explores the contributory liability of Internet intermediaries that arises from trademark infringements committed by third parties on the Internet providing a comprehensive analysis of the law applicable to the matter in an EU context It also considers the applicable laws of Germany and England to demonstrate how the rules are implemented in national laws as the current state of the law is two tiered In providing a framework of the law applicable to online contributory trademark liability the book also addresses ongoing and emerging issues that are specific to trademark law and proposes specific solutions to the issues arising in the context of online contributory trademark liability The liability of Internet intermediaries has been a popular and lively subject from different substantive rights angles However trademark law has not received a great deal of attention from either scholars or legislators As such this book fills a gap in the literature by undertaking a trademark specific examination and will be of great interest to all those involved in the research and legal practice of trademark law **Internet of Things** Rolf H. Weber, Romana Weber, 2010-06-10 The Internet of Things as an emerging global Internet based information architecture facilitating the exchange of goods and services is gradually developing While the technology of the Internet of Things is still being discussed and created the legal framework should be established before the Internet of Things is fully operable in order to allow for an effective introduction of the new information architecture If a self regulatory approach is to be adopted to provide a legal framework for the Internet of Things and this seems preferable rulemakers can draw on experiences from the current regime of Internet governance In the near future mainly businesses will operate in the Internet of Things Civil society is only expected to make use of the Internet of Things as it now does of the Internet at a later stage e g for healthcare

The Internet of Things will have an impact in various areas The regulatory framework must provide for provisions ensuring the security of the structure as well as the privacy of its users Furthermore legal barriers that may stand in the way of the coming into operation of the Internet of Things will have to be considered However the Internet of Things will also have positive effects in different fields such as the inclusion of developing countries in global trade the use of search engines to the benefit of civil society combating product counterfeiting tackling environmental concerns improving health conditions securing food supply and monitoring compliance with labor standards
