Internet Under Crisis Conditions:

The Internet Under Crisis Conditions National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on the Internet Under Crisis Conditions: Learning from September 11, 2003-01-31 This report presents findings of a workshop featuring representatives of Internet Service Providers and others with access to data and insights about how the Internet performed on and immediately after the September 11 attacks People who design and operate networks were asked to share data and their own preliminary analyses among participants in a closed workshop They and networking researchers evaluated these inputs to synthesize lessons learned and derive suggestions for improvements in technology procedures and as appropriate policy Correspondence Relating to Affairs of Japan, 1854

Surveillance or Security? Susan Landau, 2011-01-28 How in the name of greater security our current electronic surveillance policies are creating major security risks Digital communications are the lifeblood of modern society We meet up online tweet our reactions millions of times a day connect through social networking rather than in person Large portions of business and commerce have moved to the Web and much of our critical infrastructure including the electric power grid is controlled online This reliance on information systems leaves us highly exposed and vulnerable to cyberattack Despite this U S law enforcement and national security policy remain firmly focused on wiretapping and surveillance But as cybersecurity expert Susan Landau argues in *Surveillance or Security* the old surveillance paradigms do not easily fit the new technologies By embedding eavesdropping mechanisms into communication technology itself we are building tools that could be turned against us and opting for short term security and creating dangerous long term risks How can we get communications security right Landau offers a set of principles to govern wiretapping policy that will allow us to protect our national security as well as our freedom *Crisis Information Management* Christine Hagar, 2011-11-09 This book explores the management of information in crises particularly the interconnectedness of information people and technologies during crises Natural disasters such as the Haiti earthquake and Hurricane Katrina and 9 11 and human made crises such as the recent political disruption in North Africa and the Middle East have demonstrated that there is a great need to understand how individuals government and non government agencies create access organize communicate and disseminate information within communities during crisis situations This edited book brings together papers written by researchers and practitioners from a variety of information perspectives in crisis preparedness response and recovery Edited by the author who coined the term crisis informatics Provides new technological insights into crisis management information Contributors are from information science information management applied information technology informatics computer science telecommunications and libraries

Software for Dependable Systems National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Certifiably Dependable Software Systems, 2007-08-14 The focus of *Software for Dependable Systems* is a set of fundamental principles that underlie software system dependability and that suggest a different approach to the development and assessment of dependable software Unfortunately it is difficult to assess the dependability of software The field of software engineering suffers from a pervasive lack of evidence about the incidence and severity of software failures about the dependability of existing software systems about the efficacy of existing and proposed development methods about the benefits of certification schemes and so on There are many anecdotal reports which although often useful for indicating areas of concern or highlighting promising avenues of research do little to establish a sound and complete basis for making policy decisions regarding dependability The committee regards claims of extraordinary dependability that are sometimes made on this basis for the most critical of systems as unsubstantiated and perhaps irresponsible This difficulty regarding the lack of evidence for system dependability leads to two conclusions 1 that better evidence is needed so that approaches aimed at improving the dependability of software can be objectively assessed and 2 that for now the pursuit of dependability in software systems should focus on the construction and evaluation of evidence The committee also recognized the importance of adopting the practices that are already known and used by the best developers this report gives a sample of such practices Some of these such as systematic configuration management and

automated regression testing are relatively easy to adopt others such as constructing hazard analyses and threat models exploiting formal notations when appropriate and applying static analysis to code will require new training for many developers However valuable though these practices are in themselves no silver bullet and new techniques and methods will be required in order to build future software systems to the level of dependability that will be required *Energy and Water Development Appropriations for 2004* United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development,2004 *Summary of a Workshop on Software Certification and Dependability* National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on Certifiably Dependable Software Systems,2004-10-20 Certification of critical software systems e g for safety and security is important to help ensure their dependability Today certification relies as much on evaluation of the software development process as it does on the system s properties While the latter are preferable the complexity of these systems usually makes them extremely difficult to evaluate To explore these and related issues the National Coordination Office for Information technology Research and Development asked the NRC to undertake a study to assess the current state of certification in dependable systems The study is in two phases the first to frame the problem and the second to assess it This report presents a summary of a workshop held as part of the first phase The report presents a summary of workshop participants presentations and subsequent discussion It covers among other things the strengths and limitations of process new challenges and opportunities experience to date organization context and cost effectiveness of software engineering techniques A consensus report will be issued upon completion of the second phase *Beyond Productivity* National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on Information Technology and Creativity,2003-04-02 Computer science has drawn from and contributed to many disciplines and practices since it emerged as a field in the middle of the 20th century Those interactions in turn have contributed to the evolution of information technology new forms of computing and communications and new applications that continue to develop from the creative interactions between computer science and other fields Beyond Productivity argues that at the beginning of the 21st century information technology IT is forming a powerful alliance with creative practices in the arts and design to establish the exciting new domain of information technology and creative practices ITCP There are major benefits to be gained from encouraging supporting and strategically investing in this domain *The Future of Supercomputing* National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on the Future of Supercomputing,2003-09-08 The Committee on the Future of Supercomputing was tasked to assess prospects for supercomputing technology research and development in support of U S needs to examine key elements of context the history of supercomputing the erosion of research investment the changing nature of problems demanding supercomputing and the needs of government agencies for supercomputing capabilities and

to assess options for progress This interim report establishes context including the history and current state of supercomputing application requirements technology evolution the socioeconomic context to identify some of the issues that may be explored in more depth in the second phase of the study

Radio Frequency Identification Technologies
National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Radio Frequency Identification Technologies, 2005-01-29 Radio Frequency Identification RFID technology is gaining rapid acceptance as a means to track a wide array of manufactured objects Currently RFID technologies have shown promise in transportation e g smart fare cards and commerce e g inventory control for a variety of uses and are likely to find many new applications in both military and civilian areas if and when current technical issues are resolved There are a number of policy concerns e g privacy however that will become more crucial as the technology spreads This report presents a summary of a workshop held by the NRC at the request of the Defense Advanced Research Projects Agency to explore many of the key technical and policy issues Several important themes that are likely to govern expansion of RFID technology emerged from the workshop and are discussed
