Interpolation And Definability:

Interpolation and Definability Dov M. Gabbay, Larisa Maksimova, 2005-05-12 This book is a specialized monograph on interpolation and definability a notion central in pure logic and with significant meaning and applicability in all areas where logic is applied especially computer science artificial intelligence logic programming philosophy of science and natural language Suitable for researchers and graduate students in mathematics computer science and philosophy this is the latest in the prestigious world renowned Oxford Logic Guides which contains Michael Dummett's Elements of intuitionism second edition J M Dunn and G Hardegree's Algebraic Methods in Philosophical Logic H Rott's Change Choice and Inference A Study of Belief Revision and Nonmonotonic Reasoning P T Johnstone's Sketches of an Elephant A Topos Theory Compendium Volumes 1 and 2 and David J Pym and Eike Ritter's Reductive Logic and Proof Search Proof theory semantics and control

Larisa Maksimova on Implication, Interpolation, and Definability Sergei Odintsov, 2018-01-30 This edited volume focuses on the work of Professor Larisa Maksimova providing a comprehensive account of her outstanding contributions to different branches of non classical logic The book covers themes ranging from rigorous implication relevance and algebraic logic to interpolation definability and recognizability in superintuitionistic and modal logics It features both her scientific autobiography and original contributions from experts in the field of non classical logics Professor Larisa Maksimova's influential work involved combining methods of algebraic and relational semantics Readers will be able to trace both influences on her work and the ways in which her work has influenced other logicians In the historical part of this book it is possible to trace important milestones in Maksimova's career Early on she developed an algebraic semantics for relevance logics and relational semantics for the logic of entailment Later Maksimova discovered that among the continuum of superintuitionistic logics there are exactly three pretabular logics She went on to obtain results on the decidability of tabularity and local tabularity problems for superintuitionistic logics and for extensions of S4 Further investigations by Maksimova were aimed at the study of fundamental properties of logical systems different versions of interpolation and definability disjunction property etc in big classes of logics and on decidability and recognizability of such properties To this end she determined a powerful combination of algebraic and semantic methods which essentially determine the modern state of investigations in the area as can be seen in the later chapters of this book authored by leading experts in non classical logics These original contributions bring the reader up to date on the very latest work in this field

Interpolation and Definability in Modal Logics Dov M. Gabbay, 2005 *Definability and Interpolation* Eva Hoogland, 2001

Institution-independent Model Theory Răzvan Diaconescu, 2025-03-05 A model theory that is independent of any concrete logical system allows a general handling of a large variety of logics This generality can be achieved by applying the theory of institutions that provides a precise general mathematical formulation for the intuitive concept of a logical system Especially in computer science where the development of a huge number of specification logics is observable institution

independent model theory simplifies and sometimes even enables a concise model theoretic analysis of the system Besides incorporating important methods and concepts from conventional model theory the proposed axiomatic top down methodology allows for a structurally clean understanding of model theoretic phenomena Consequently results from conventional concrete model theory can be understood more easily and sometimes even new results are obtained Moreover all this is also applied to non classical model theories This second edition introduces some novelties in the presentation style which aim to enhance the readability of the material and the proofs Additional chapters have also been added Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2010-11-25 Lambda Calculi A Guide Interpolation and Definability Discourse Representation Theory *Model-Theoretic Logics* J. Barwise, Solomon Feferman, S. Feferman, 2017-03-02 This book brings together several directions of work in model theory between the late 1950s and early 1980s **Model Theory** Chen Chung Chang, H. Jerome Keisler, 2012-01-01 This bestselling textbook for higher level courses was extensively revised in 1990 to accommodate developments in model theoretic methods Topics include models constructed from constants ultraproducts and saturated and special models 1990 edition **Proceedings of the International Conference on Algebra Dedicated to the Memory of A. Masuch,2013-03-09 A selection of papers presented at the international conference Applied Logic Logic at Work held in Amsterdam in December 1992 Nowadays the term applied logic has a very wide meaning as numerous applications of logical methods in computer science formal linguistics and other fields testify Such applications are by no means restricted to the use of known logical techniques at its best applied logic involves a back and forth dialogue between logical theory and the problem domain The papers focus on the application of logic to the study of natural language in syntax semantics and pragmatics and the effect of these studies on the development of logic In the last decade the dynamic nature of natural language has been the most interesting challenge for logicians Dynamic semantics is here applied to new topics the dynamic approach is extended to syntax and several methodological issues in dynamic semantics are systematically investigated Other methodological issues in the formal studies of natural language are discussed such as the need for types modal operators and other logical operators in the formal framework Further articles address the scope of these methodological issues from other perspectives ranging from cognition to computation The volume presents papers that are interesting for graduate students and researchers in the field of logic philosophy of language formal semantics and pragmatics and computational linguistics

[Q-Bibliography of Mathematical Logic](#) Heinz-Dieter Ebbinghaus,2013-06-29 Gert H M ller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistica tion specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature partic ularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists some where in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg 11 Non classical Logics W Rautenberg 111 Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI ProofTheory Constructive Mathematics J E Kister D van Dalen A S Troelstra
