Intertidal Fishes Life In Two Worlds:

Intertidal Fishes Michael H. Horn, Karen L.M Martin, Michael A. Chotkowski, 1998-11-03 *Intertidal Fishes* describes the fishes inhabiting the narrow strip of habitat between the high and low tide marks along the rocky coastlines of the world. It analyzes the specialized traits of these fishes that have adapted to living in the dynamic and challenging space where they are alternately exposed to the air and submerged in water with the ebb and flow of the tides. This book provides a comprehensive account of fishes largely overlooked in many previous studies of intertidal organisms and emphasizes how they differ from fishes living in other deeper water habitats. Coverage includes air breathing movements and homing sensory systems, spawning and parental care, feeding habits, community structure, systematic relationships, distribution patterns, and the fossil record in the intertidal zone. Written by an international team of 21 experts on intertidal fish biology. Worldwide coverage of intertidal fishes. Comprehensive phylogenetic listing of all fish families with intertidal members. Global biogeographic analysis involving over 700 species from 86 sites. Outlines field and laboratory methods pertinent to studying intertidal fishes. Thorough ecological coverage with chapters on vertical distribution, movements and homing, reproduction, feeding and community structure. Covers the physiology of aerial and aquatic respiration, osmoregulation and sensory systems.

Beach-Spawning Fishes Karen L.M. Martin, 2014-09-13 Beach spawning fishes from exotic locations on most continents of the world provide spectacular examples of extreme adaptations during the most vulnerable life cycle stages. The beauty, intriguing biology and importance of these charismatic fishes at the interface of marine and terrestrial ecosystems have inspired numerous scientific studies.

Adap Fish Physiology: The Physiology of Tropical Fishes Adalberto Luis Val, Vera Maria Fonseca de Almeida e Val, David J. Randall, 2005-08-18 *The Physiology of Tropical Fishes* is the 21st volume of the well known *Fish Physiology* series and consists of 12 chapters. The purpose of the book is to consolidate and integrate what is known about tropical fishes, marine and freshwater species. The twelve chapters focus on the physiological adaptations acquired during the evolutionary process to cope with warm and shallow hypoxic waters from tropical and neotropical hydrographic basins as well as with the intertidal and coral reef habitats which occur in abundance in tropical seas. The special characteristics of tropical fish fauna will be issued in order to explain the tropical fish radiation which gave rise to such extreme fish diversity. This present volume is a voyage through the tropical region reviewing the fish diversity of the main tropical freshwater sheds including the major tropical rivers and lakes, the major dams and marine environments. State of the art information on tropical fish physiology. Written by specialists working in the Tropics. Offers a diverse depiction of the various tropical fishes and the environment where they inhabit. 12 innovative chapters covering a concise view of growth rate, biological rhythms, feeding plasticity, cardio-respiratory design and function, diversity of structure and much more.

Respiratory Physiology of Vertebrates Göran E. Nilsson, 2010-01-28 How do vertebrates get the oxygen they need or even manage without it for shorter or longer periods of time How do they sense oxygen how do they take it up from water or air and how do they transport it to their tissues Respiratory system adaptations allow numerous vertebrates to thrive in extreme environments where oxygen availability is limited or where there is no oxygen at all Written for students and researchers in comparative physiology this authoritative summary of vertebrate respiratory physiology begins by exploring the fundamentals of oxygen sensing uptake and transport in a textbook style Subsequently the reader is shown important examples of extreme respiratory performance like diving and high altitude survival in mammals and birds air breathing in fish and those few vertebrates that can survive without any oxygen at all for several months showing how evolution has solved the problem of life without oxygen
