Rodríguez, Eric B. Taylor, 2002-07-31 *Salvelinus* species are one of the most thoroughly studied groups of fishes Many reasons explain this intense interest in charr biology Charrs have a Holarctic distribution encompassing many Asian North American and European countries and occupy diverse marine and freshwater environments Furthermore the current distribution of charr includes areas that were directly influenced by climate and topographic change associated with the many Pleistocene glaciations Undoubtedly these conditions have promoted much of the tremendous morphological ecological and genetic variability and plasticity within *Salvelinus* species and they make charr very good models to study evolutionary processes in action Many charr species also exhibit demographic characteristics such as slow growth late maturity and life in extreme environments that may increase their susceptibility to extinction from habitat changes and overexploitation especially in depauperate aquatic habitats This vulnerability makes understanding their biology of great relevance to biodiversity and conservation Finally charr are of great cultural commercial and recreational significance to many communities and their intimate linkage with human societies has stimulated much interest in this enigmatic genus This volume comprises a selection of papers presented at the fourth International Charr Symposium held in Trois Rivières Québec Canada from 26 June to 1 July 2000 It includes 31 papers on ecological interactions and behaviour trophic polymorphism movement and migration ecophysiology and evolutionary genetics ecological parasitology environmental stress and conservation These studies cannot cover all recent developments in the ecology behaviour and conservation of *Salvelinus* species but collecting them into a special volume should bring attention to current research on this important genus and stimulate further work on *Salvelinus* species      **Rapports et procès-verbaux des réunions** International Council for the Exploration of the Sea, 1981 Includes administrative and special reports      The Siberian Sturgeon (*Acipenser baerii*, Brandt, 1869) Volume 1 - Biology Patrick
