Computing Essentials Mirosław Majewski, 2012-12-06 In July 2000 I attended the conference on Technology in Mathematics Education in Beirut After my lecture on the role of programming in teaching mathematics several teachers asked me if I can tell them something about the tools that can be used for teaching high school mathematics They knew about such packages as Maple V Mathematica or Derive but they didn't have the resources to buy these packages or site licenses for their schools As a result of this question we went into a long and very interesting discussion about MuPAD It was at this time that I started thinking about writing a book about MuPAD which could be useful for teachers of mathematics and their students Now that dream has come true and you have this book in your hands I hope you will enjoy it This book should be considered as first steps through mathematics with MuPAD It is not a MuPAD reference book and in fact many MuPAD related topics are not discussed here at all Nor is it a text for a regular computer assisted course of mathematics What it is is an exciting excursion through different areas of mathematics facilitated by MuPAD and I will show you the basic instructions that are useful for these specific areas I will explore many topics and show you many examples However it may turn out that the particular topic you are interested in has been omitted **Fundamentals in Handwriting Recognition**

Sebastiano Impedovo, 2012-12-06 For many years researchers in the field of Handwriting Recognition were considered to be working in an area of minor importance in Pattern Recognition They had only the possibility to present the results of their research at general conferences such as the ICPR or publish their papers in journals such as some of the IEEE series or PR together with many other papers generally oriented to the more promising areas of Pattern Recognition The series of International Workshops on Frontiers in Handwriting Recognition and International Conferences on Document Analysis and Recognition together with some special issues of several journals are now fulfilling the expectations of many researchers who

have been attracted to this area and are involving many academic institutions and industrial companies But in order to facilitate the introduction of young researchers into the field and give them both theoretically and practically powerful tools it is now time that some high level teaching schools in handwriting recognition be held also in order to unite the foundations of the field Therefore it was my pleasure to organize the NATO Advanced Study Institute on Fundamentals in Handwriting Recognition that had its origin in many exchanges among the most important specialists in the field during the International Workshops on Frontiers in Handwriting Recognition
