Nickl, 2021-03-25 In nonparametric and high dimensional statistical models the classical Gauss Fisher Le Cam theory of the optimality of maximum likelihood estimators and Bayesian posterior inference does not apply and new foundations and ideas have been developed in the past several decades. This book gives a coherent account of the statistical theory in infinite dimensional parameter spaces. The mathematical foundations include self contained mini courses on the theory of Gaussian and empirical processes, approximation and wavelet theory and the basic theory of function spaces. The theory of statistical inference in such models: hypothesis testing, estimation and confidence sets is presented within the minimax paradigm of decision theory. This includes the basic theory of convolution kernel and projection estimation but also Bayesian nonparametrics and nonparametric maximum likelihood estimation. In a final chapter the theory of adaptive inference in nonparametric models is developed including Lepski's method, wavelet thresholding and adaptive inference for self similar functions.
