## Fundamentals of Automatic Control

Classification of automatic control in terms of control methodologies

### Feedback

- What is feedback?
- Information that tells you how you're doing
- Automatic controller uses feedback
  - Difference between the Process Variable and the Set point (the error) tells the controller how well it's doing.
  - The less the error, the better the performance
- Open loop control does not use feedback
  - Example: timed lawn sprinkler system
    - Even if it rains, the sprinkler turns on because it has no feedback that
