Fundamentals Of Decision Making And Priority Theory With The Analytic Hierarchy Process:

Fundamentals of Decision Making and Priority Theory With the Analytic Hierarchy Process Thomas L. Saaty, This book is a comprehensive summary primarily of the author's own thinking and research about the Analytic Hierarchy Process and decision making. It includes advanced mathematical theory and diverse applications. Fundamentals of Decision Making has all the latest theoretical developments in the AHP and new theoretical material not published elsewhere. We consider this book to be the replacement for the original book on the subject The Analytic Hierarchy Process that was published by McGraw Hill Publishers New York.

Fundamentals of Decision Making and Priority Theory with the Analytic Hierarchy Process, 2006 **Fundamentals of Decision Making and Priority Theory with the Analytic Hierarchy Process** Thomas L. Saaty, 2000 **Models, Methods, Concepts & Applications of the Analytic Hierarchy Process** Thomas L. Saaty, Luis G. Vargas, 2012-12-06

Models, Methods, Concepts and Applications of the Analytic Hierarchy Process is a volume dedicated to selected applications of the Analytic Hierarchy Process. AHP focused on three themes: economics, the social sciences, and the linking of measurement with human values. 1 The AHP offers economists a substantially different approach to dealing with economic problems through ratio scales. The main mathematical models on which economics has based its quantitative thinking up to now are utility theory, which uses interval scales and linear programming. We hope that the variety of examples included here can perhaps stimulate researchers in economics to try applying this new approach. 2 The second theme is concerned with the social sciences. The AHP offers psychologists and political scientists the methodology to quantify and derive measurements for intangibles. We hope that the examples included in this book will encourage them to examine the methods of AHP in terms of the problems they seek to solve. 3 The third theme is concerned with providing people in the physical and engineering sciences with a quantitative method to link hard measurement to human values. In such a process, one needs to interpret what the measurements mean. A number is useless until someone understands what it means. It can have different meanings in different problems. Ten dollars are plenty to satisfy one's hunger but are useless by themselves in buying a new car. Such measurements are only indicators of the state of a system but do not relate to the values of the human observers of that system. AHP methods can help resolve the conflicts between hard measurement data and human values.
