Basics of Marine and Estuarine Ecology Abhijit Mitra, Sufia Zaman, 2016-02-02 The book presents recent research on marine ecology in different parts of the world It aims to shed light on relevant topics for budding marine ecologists The blue soup of Planet Earth which comprises both biotic and abiotic components is essential to keeping the wheel of civilization running Four major ecosystem service categories have been identified within this context namely provisioning services such as water food mangrove timber honey fish wax fuel wood fodder and bioactive compounds from marine and estuarine flora and fauna regulating services such as the regulation of climate coastal erosion coral bleaching and pollution cultural services encompassing recreational tourism spiritual and other non material benefits and supporting services such as nutrient cycling and photosynthesis These valuable services are obtained from various resources that must be conserved for the sake of

humanity This book presents data for each resource type not just in the form of a simple description but also through case studies that resulted from several research projects and pilot programs carried out in different parts of the world Statistical tools were also used to critically analyze the influence of relevant hydrological parameters on the biotic community Advanced research in marine and estuarine ecology is based on the use of sophisticated instruments sampling precision statistical tools etc which have also been highlighted in the book The Dilemma Of Amazonian Development Emilio F Moran, 2019-05-28 This book the first to apply the combined approaches of anthropology geography ecology economics and sociology to the analysis of the Amazon River region and its imminent development explores the impact of development on Amazonian populations and the results of rural and urban growth strategies The authors use the methodologies of **Radical Human Ecology** Rose Roberts, 2016-04-08 Human ecology the study and practice of relationships between the natural and the social environment has gained prominence as scholars seek more effectively to engage with pressing global concerns In the past seventy years most human ecology has skirted the fringes of geography sociology and biology This volume pioneers radical new directions In particular it explores the power of indigenous and traditional peoples epistemologies both to critique and to complement insights from modernity and postmodernity Aimed at an international readership its contributors show that an inter cultural and transdisciplinary approach is required.
