Mikesell, Raymond Mikesell, 2025-10-01 In an uncertain international economic environment the United States is increasingly dependent upon foreign suppliers for many things including nonfuel minerals This book deals with the major problems and policy issues involved with these minerals The major problems concern the medium and long term availability of world supplies the competitive structure of nonfuel mineral industries and the location of world production and consumption Special attention is given to the production of nonfuel minerals in developing countries and the role of foreign investment in Third World mineral industries The major policy include reducing U S vulnerability to disruption of imports of nonfuel minerals subsidizing or protecting against imports domestic producers of nonfuel minerals conflicts between environmentalists and the mining industry and international loans to Third World metal producing countries While the treatment of conflicting policy positions is objective the author comes out on the side of unrestricted competition in world markets including elimination of domestic subsidies to import barriers the use of economic stockpiles to reduce vulnerability to import disruption and maintenance of strict environmental pollution standards The author is optimistic about the long run outlook for mineral supplies necessary to meet world requirements for economic growth United States domestic mineral independence may be unnecessary in terms of national security and too costly to consumers and the environment
