Mössbauer Spectroscopy Applied to Magnetism and

Materials Science G.J Long,F. Grandjean,2013-06-29 This book represents Volume 2 in a series on the use of Mossbauer spectroscopy in the study of magnetism and materials However the perceptive reader will notice some differences from Volume 1 Specifically in order to market the book at a more affordable price for most universities and research laboratories the book has been prepared in camera ready format The editors and the authors agreed to do this because there is a demand for such a book in the Mossbauer community This format has placed an extra burden on the editors and the authors and we hope we have overcome all the difficulties generated by the transfer of files between different computers In order to make the book more attractive to materials scientists who are not experts in Mossbauer spectroscopy this volume is particularly oriented towards the study of materials by Mossbauer spectroscopy and related complementary techniques such as neutron scattering and a variety of surface scattering techniques The authors of this volume can be proud of the high quality professional effort they have devoted to clearly presenting their specific topics As a result we very much enjoyed working with the authors on this volume We hope that their effort will help to educate the next generation of Mossbauer effect spectroscopists a generation which will face the challenge of maintaining equally high scientific and professional standards in their research work *Spectroscopy of Complex Oxide Interfaces* Claudia Cancellieri,Vladimir N. Strocov,2018-04-09

This book summarizes the most recent and compelling experimental results for complex oxide interfaces The results of this book were obtained with the cutting edge photoemission technique at highest energy resolution Due to their fascinating properties for new generation electronic devices and the challenge of investigating buried regions the book chiefly focuses on complex oxide interfaces The crucial feature of exploring buried interfaces is the use of soft X ray angle resolved photoemission spectroscopy ARPES operating on the energy range of a few hundred eV to increase the photoelectron mean free path enabling the photons to penetrate through the top layers in contrast to conventional ultraviolet UV ARPES techniques The results presented here achieved by different research groups around the world are summarized in a clearly structured way and discussed in comparison with other photoemission spectroscopy techniques and other oxide materials They are complemented and supported by the most recent theoretical calculations as well as results of complementary experimental techniques including electron transport and inelastic resonant X ray scattering **Interface Science and**

Composites Soo-Jin Park,Min-Kang Seo,2011-07-18 The goal of Interface Science and Composites is to facilitate the manufacture of technological materials with optimized properties on the basis of a comprehensive understanding of the molecular structure of interfaces and their resulting influence on composite materials processes From the early development of composites of various natures the optimization of the interface has been of major importance While there are many reference books available on composites few deal specifically with the science and mechanics of the interface of materials and composites Further many recent advances in composite interfaces are scattered across the literature and are here assembled in a readily accessible form bringing together recent developments in the field both from the materials science

and mechanics perspective in a single convenient volume The central theme of the book is tailoring the interface science of composites to optimize the basic physical principles rather than on the use of materials and the mechanical performance and structural integrity of composites with enhanced strength stiffness and fracture toughness or specific fracture resistance It also deals mainly with interfaces in advanced composites made from high performance fibers such as glass carbon aramid and some inorganic fibers and matrix materials encompassing polymers carbon metals alloys and ceramics Includes chapter on the development of a nanolevel dispersion of graphene particles in a polymer matrix Focus on tailoring the interface science of composites to optimize the basic physical principles Covers mainly interfaces in advanced composites made from high performance fibers **Adventures in Contemporary Electromagnetic Theory** Tom G. Mackay, Akhlesh
