Rauhe, 2008-12-21 Recent interest in nanotechnology is challenging the community to analyse develop and design nanometer to micrometer sized devices for applications in new generations of computer electronics photonics and drug delivery systems To successfully design and fabricate novel nanomaterials and nanosystems we must necessarily bridge the gap in our understanding of mechanical properties and processes at length scales ranging from 100 nanometers where atomistic simulations are currently possible to a micron where continuum mechanics is experimentally validated For this purpose the difficulties and complexity originate in the substantial differences in philosophy and viewpoints between conventional continuum mechanics and quantum theories The challenge lies in how to establish the relationship between a continuum mechanical system and its atomistic counterpart in order to define continuum variables that are calculable within an atomic system **Nanophysics, Nanomaterials, Interface Studies, and Applications** Olena Fesenko, Leonid

Graded Nanometals Krzysztof J. Kurzydłowski, Z. Pakieła, 2005 In recent years bulk and graded nanometals have attracted the growing interest of materials scientists Nanometals can be obtained by using various methods gas condensation or ball milling with subsequent consolidation thermal spray techniques annealing of thin amorphous ribbons and severe plastic deformation The plastic deformation methods include severe torsional straining under high pressures equal channel angular pressing cyclic extrusion compression and others IUTAM Symposium on Surface Effects in the Mechanics of

Nanomaterials and Heterostructures Alan Cocks, Jianxiang Wang, 2012-09-26 This volume constitutes the proceedings of the IUTAM Symposium on Surface Effects in the Mechanics of Nanomaterials and Heterostructures held in Beijing 8-12 August 2010 The symposium brought together the most active scientists working in this area from the fields of solid mechanics composites physics and materials science and summarized the state of the art research results with a view to advancing the frontiers of mechanics and materials physics Nanomaterials and heterostructures have a large fraction of their atoms at

surfaces and interfaces These atoms see a different environment to those in the interior and can have a substantial effect on the overall mechanical and physical behaviour of a material The last decade has witnessed a growing interest in the study of surfaces and how the surface behaviour couples with that of the bulk to determine the overall system response The papers in this proceedings cover extension of continuum mechanics and thermodynamics to the nano scale multiscale simulations surface effects in monolithic nano scale elements and nanostructures mechanical and physical properties of nanomaterials and heterostructures self assembly etc The surface stress effect is inherently a multidisciplinary and fertile field the Symposium truly reflects these features This IUTAM Symposium was also dedicated to Professor Bhushan L Karihaloo of Cardiff University on his impending retirement in recognition of his contributions to the fields of solid mechanics and nanomechanics and to IUTAM activities in general
