

2.0 MATHEMATICAL LANGUAGE AND SYMBOLS

2.0 Learning Outcomes

On completion of the module, you should be able to:

1. discuss the language, symbols, and conventions of mathematics;
2. explain the nature of mathematics as a language; and
3. perform operations on mathematical expressions.

2.1 Introduction

Mathematics is written in a symbolic language that is designed to express mathematical thoughts. Language is necessary to facilitate communication or to express your ideas, feelings or opinion. It serves as the transmitter of information and knowledge. It leads to understanding of one's language and also helps to construct social identity. This part of the module describes how mathematical thoughts, methods and facts, are expressed in symbols. You will be taught the mathematical way of thinking that will serve you in a wide range of situations. Sometimes, when you start working on mathematical problems, you find it hard to proceed because you lack enough knowledge on its language and symbols. The closer you get to a solution to a problem, the more you need language that expresses mathematical ideas clearly and precisely. This unit will give you some of the special language of variables, sets, relations, and functions in order to warm up your mental muscles and do your best in performing mathematical expressions and eventually, solving problems activities.
