Internal Credit Risk Models Capital Allocation And Performance Measurement:

Internal Credit Risk Models Michael K. Ong, 1999 A practical accessible step by step analysis of the theory and practicalities of credit risk measurement and management A Critical Assessment of Basel II, Internal Rating Based Approach Vahit Ferhan Benli, 2010 **Credit Risk Pricing Models** Bernd Schmid, 2012-11-07 This new edition is a greatly extended and updated version of my earlier monograph Pricing Credit Linked Financial Instruments Schmid 2002 Whereas the first edition concentrated on the research which I had done in the context of my PhD thesis this second edition covers all important credit risk models and gives a general overview of the subject I put a lot of effort in explaining credit risk factors and show the latest results in default probability and recovery rate modeling There is a special emphasis on correlation issues as well The broad range of financial instruments I consider covers not only defaultable bonds defaultable swaps and single counterparty credit derivatives but is further extended by multi counterparty instruments like index swaps basket default swaps and collateralized debt obligations I am grateful to Springer Verlag for the great support in the realization of this project and want to thank the readers of the first edition for their overwhelming feedback Last but not least I want to thank Uli G ser for ongoing patience encouragement and support my family and especially my sister Wendy for being there at all times Bernd Schmid Stuttgart November 2003 Contents 1 Introduction 1 1 1 Motivation 1 1 2 Objectives Structure and Summary 5 2 Modeling Credit Risk Factors 13 2 1 Introduction 13 2 2 Definition and Elements of Credit Risk 13 2 3 Modeling Transition and Default Probabilities 14 2 3 1 The Historical Method 15 **Integrated Market and Credit Portfolio Models** Peter Grundke, 2008-08-15 Due to their business activities banks are exposed to many different risk types Peter Grundke shows how various risk exposures can be aggregated to a comprehensive risk position Furthermore computational problems of determining a loss distribution that comprises various risk types are analyzed **The Implications of the "New Capital Adequacy Framework" for Credit Risk and Capital Management in the Banking Industry** Miriam Benz, 2002-04-18 Inhaltsangabe Abstract In their role as financial intermediaries banks have the inherent task of assuming risks This statement follows Diamond's model 1984 that financial intermediaries exist because they have a comparative advantage in the production of private information Higher competition and complexity as well as a riskier environment however have increased the importance of managing and controlling one of the banks core risks credit risk Before analysing the implications on specific credit risk instruments the thesis will describe the relevant content of The New Basel Capital Accord and explain the general context of credit risk and capital management within a bank An analysis of the implications of The New Basel Capital Accord implies the question of how the new incentive structures will modify credit risk and capital management activities within banks and shape the competitive environment of the banking industry More specifically it will be investigated how the significance and type of credit risk and capital management will change and what effect The New Basel Capital Accord will have on the development of credit risk measurement instruments The paper will

also describe the impacts of the new Accord on the market for credit derivatives and securitizations and on the structure of these transactions Moreover it is important to consider how the scarce and essential resource capital will be affected and what potential conclusions can be drawn The thesis will show that The New Basel Capital Accord is a major step forward in banking regulation that will better align regulatory and economic capital It will encourage the usage of internal rating approaches credit derivatives and securitizations It will also influence capital allocation and lead to an extended use of active portfolio management As a consequence of changed incentive structures the analysis will indicate that The New Basel Capital Accord will be an important driver for the advancement and improvement of credit risk measurement and internal credit risk models

Internal Models, Subordinated Debt, and Regulatory Capital Requirements for Bank Credit Risk Paul H. Kupiec,2002-09 Shortcomings make credit VaR estimates an unsuitable basis for setting bank regulatory capital requirements If alternatively banks are required to issue subordinated debt that has a minimum market value and maximum acceptable probability of default banks must set their equity capital in a manner that limits both the probability of bank default and the expected loss on insured deposits largely removing any safety net related funding cost subsidy and the moral hazard incentives it creates Required equity capital can be estimated using a modified credit VaR framework and supervisors can use external credit ratings to indirectly verify the accuracy of bank internal model estimates
