The Need for International Reserves and Credit

Facilities J. de Beaufort Wijnholds, 2013-11-11 International monetary economics essentially deals with three problems viz the nature and stability of the international monetary system the balance of payments adjustment process and international liquidity reserves and credit facilities All three categories are interrelated The exchange rate system has an important bearing on the manner in which the adjustment process functions as well as on the need for international liquidity The adjustment process is an important determinant of the need for international liquidity The adequacy of international liquidity influences the working of the adjustment process Ultimately developments in international liquidity and in the adjustment process determine the nature and stability of the international monetary system a sustained malfunctioning of the adjustment process brought about by a serious imbalance in international liquidity or by other causes will bring about a new international monetary system either through collapse or reform of the old system This study deals only with the problem of international liquidity However it touches on the two other main aspects of international monetary economics insofar as they have a bearing on international reserves and credit facilities In the literature international liquidity is most often defined as including international reserves gold SDRs foreign exchange and claims on the IMF and international credit facilities IMF drawing rights EEC support arrangements and central bank multilateral and bilateral credit facilities This definition will also be followed in this study

The International Monetary System Robert J. Carbaugh, Liang-Shing Fan, 1976 International monetary reform is of vital importance to the countries of the world Although many studies have been made of the structure and problems of the international payment mechanism few provide an analytical survey of the international monetary system This study analyzes the structural and operational limitations of past systems as well as the major reform proposals for modifying and or replacing the current system with a new payment mechanism The authors describe the structure and nature of the international payment system and identify the issues relating to international adjustment liquidity and confidence They discuss the nature of international liquidity including liquidity's purpose sources of demand and supply and potential shortcomings They analyze the theoretical and empirical implications of the gold standard Of primary concern is the extent to which the actual operations of the system corresponded to the theoretical role of the gold standard and the nature and limitations of the so called dollar gold system that prevailed in the past quarter century until 1971 The major reform proposals of the international payment mechanism are next discussed Included are the proposals of historical interest such as Keynes Triffin Bernstein Stamp Angell Rueff and the currently debated issues of the Special Drawing Rights standard freely floating exchange rates and the wider band and crawling pegged exchange rate mechanisms Finally the authors analyze the nature operation and future role of the managed float exchange rate system which resulted from the international monetary crisis of 1973 Of particular interest are the effects of the Organization of Petroleum Exporting Countries OPEC cartel on the U S dollar as a reserve currency and the monetary effects of the cartel's balance of payments surplus on the world financial markets This study provides the historical background the institutional framework and a
