Principles of International Environmental Law I Philippe Sands, 1995 This post UNCED account of the frameworks standards and implementation of the international environmental law is intended for undergraduates and academics in the fields of international law politics geography economics and environmental studies It can be used on its own as a reference or course text or in conjunction with its companion collections of documents The Making of International Environmental Treaties Gerry Nagtzaam, 2009 Gerry Nagtzaam contends that in recent decades neoliberal institutionalist scholarship on global environmental regimes has burgeoned as has constructivist scholarship on the key role played by norms in international politics In this innovative volume the author sets these interest and norm based approaches against each other in order to test their ability to illustrate why and how different environmental norms take hold in some regimes and not others The book explores why some global environmental treaties seek to preserve and protect some parts of nature from human utilization some seek to conserve certain parts of nature for human development whilst others allow the reckless exploitation of nature without accounting for the consequences It tracks the fate of these three underlying environmental norms preservation conservation and exploitation using case studies on whaling mining in Antarctica and tropical timber The book illustrates how international political battles to shape environmental regimes inevitably result in clashes between these competing environmental norms This unique study will prove a fascinating read for both academics and practitioners in the fields of international environmental politics and international environmental law *Agriculture, Environment, and Health*, 1994 *Historical Dictionary of the Green Movement* Miranda Schreurs, Elim Papadakis, 2020-02-26 There are very serious environmental problems facing the planet Biodiversity loss has reached unprecedented levels Climate change is progressing so rapidly that within this century we are likely to see substantial sea level rise There has been dramatic loss of tropical

rainforests Plastic pollution is killing wildlife and polluting our oceans Various movements old and new are addressing these green issues Civil society activism has taken on new strategies with the emergence of new technologies and global networks of green activists have formed A new generation of green activists are emerging and boldly criticizing the status quo At the same time in some parts of the world green movements that looked like they were beginning to gain a political foothold or were even doing quite well are in retreat The reasons are complex Some suffer from lack of funding and hostile political and legal environments Others are being attacked by populist politicians who see green activism as a threat The second edition of Historical Dictionary of the Green Movement contains a chronology an introduction and an extensive bibliography The dictionary section has over 300 cross referenced on green movements green politics green trends and major environmental agreements and events This book is an excellent resource for students researchers and anyone wanting to know more about the green movement

Principles of International Environmental Law Philippe Sands, Jacqueline Peel, 2012-05-03 The third edition of this classic textbook offers comprehensive and critical commentary on international environmental law It fully covers the key topics of the course and is clearly structured to include the history and framework in which international environmental law exists key areas of regulation and implementation links to other areas of law and future developments It has been updated to incorporate all the latest developments in treaty and case law Extensive feedback on previous editions results in a restructuring of material including a new part focused on linkage to other areas of international law including human rights international trade and foreign investment There is also a new chapter on future developments charting the directions in which the subject is moving Specialist authors writing on oceans seas and fisheries and biodiversity add to the expertise of the two principal authors for an authoritative overview of the subject

Global Warming and China's Environmental Diplomacy Hongyuan Yu,2008 Since the early 1990s there are two increasingly hot topics attracting numerous scholarly attentions in Chinese politics first it is the transformation of China s political system Second it is China s increasingly involvement in international regimes Nevertheless until now there are only a few scholars to work out the distinctive relations between them and even less people work on the bureaucratic politics level By explaining and evaluating the development of policymaking coordination in the United Nations Framework Convention on Climate Change UNFCCC the author demonstrates the argument that international regimes have contributed to the development of coordination in Chinese Policymaking taking the UNFCCC as a departure

The International Politics of Whaling Peter J. Stoett,2011-11-01 Whales large mysterious intelligent and endangered In 1986 a global moratorium on whaling was issued by the International Whaling Commission However that decision was not without controversy Some countries such as Norway continue to whale in defiance of the ban In this fascinating book Peter Stoett combines ecological sensitivity with a hard assessment of the political realities of the international regime to examine this important issue *The International Politics of Whaling* examines contemporary whaling

issues with an emphasis on three factors our knowledge of whales and current whale populations and the impact of whaling the actors and institutions involved in the debate over whaling and the ethical dimension Reluctantly he concludes that the current global moratorium on whaling is problematic and that we must focus instead on habitat preservation in order to protect whales more effectively *The European Union in International Climate Change Negotiations* Stavros Afionis, 2017-02-17 The EU has been portrayed as a leader in international climate change negotiations Its role in the development of the climate change regime as well as the adoption of novel policy instruments such as the EU Emissions Trading Scheme in 2005 are frequently put forward as indicative of a determination to push the international climate agenda forward However there are numerous instances where the EU has failed to achieve its climate change objectives e g the 2009 Copenhagen Conference of the Parties It is therefore important to examine the reasons behind these failures This book explores in detail the involvement of the EU in international climate talks from the late 1980s to the present focusing in particular on the negotiations leading up to Copenhagen This conference witnessed the demise of the top down approach in climate change policy and dealt a serious blow to the EU s leadership ambitions This book explores the extent to which negotiation theory could help with better comprehending the obstacles that prevented the EU from getting more out of the climate negotiation process It is argued that looking at the role played by problematic strategic planning could prove highly instructive in light of the Paris Agreement This broad historical perspective of the EU s negotiations in international climate policy is an important resource to scholars of environmental and European politics policy law and governance
