Osif, 2006-08-23 The field of engineering is becoming increasingly interdisciplinary and there is an ever growing need for engineers to investigate engineering and scientific resources outside their own area of expertise However studies have shown that quality information finding skills often tend to be lacking in the engineering profession Using the Engineerin **Using the Engineering Literature, Second Edition** Bonnie A. Osif, 2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of Using the Engineering Literature used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age Using the Engineering Literature Second Edition provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format

Books In Print 2004-2005 Ed Bowker Staff, Staff Bowker, Ed, 2004 *Software Architecture and Design for Reliability Predictability* Assefa D. Semegn, 2011-09-22 Reliability prediction of a software product is complex due to interdependence and interactions among components and the difficulty of representing this behavior with tractable models Models developed by making simplifying assumptions about the software structure may be easy to use but their result may be far from what happens in reality Making assumptions closer to the reality which allows complex interactions and interdependences among

components results in models that are too complex to use Their results may also be too difficult to interpret The reliability prediction problem is worsened by the lack of precise information on the behavior of components and their interactions information that is relevant for reliability modeling Usually the interactions are not known precisely because of subtle undocumented side effects Without accurate precise information even mathematically correct models will not yield accurate reliability predictions Deriving the necessary information from program code is not practical if not impossible This is because the code contains too much implementation detail to be useful in creating a tractable model It is also difficult to analyze system reliability completely based on the program code This book documents the resulting novel approach of designing specifying and describing the behavior of software systems in a way that helps to predict their reliability from the reliability of the components and their interactions The design approach is named design for reliability predictability DRP It integrates design for change precise behavioral documentation and structure based reliability prediction to achieve improved reliability prediction of software systems The specification and documentation approach builds upon precise behavioral specification of interfaces using the trace function method TFM It also introduces a number of structure functions or connection documents These functions capture both the static and dynamic behaviors of component based software systems They are used as a basis for a novel document driven structure based reliability prediction model System reliability assessment is studied in at least three levels component reliability which is assumed to be known interaction reliability a novel approach to studying software reliability and service reliability whose estimation is the primary objective of reliability assessment System reliability can be expressed as a function of service reliability A mobile streaming system designed and developed by the author as an industrial product is used as a case study to demonstrate the application of the approach
