Application of Sliding Mode Methods to the Design of Reconfigurable Flight Control Systems Scott R. Wells,2002 Observer based sliding mode control is investigated for application to aircraft reconfigurable flight control An

overview of reconfigurable flight control is given including a review of the current state of the art within the subdisciplines of fault detection parameter identification adaptive control schemes and dynamic control allocation Of the adaptive control methods reviewed sliding mode control SMC appears promising due its property of invariance to matched uncertainty An overview of SMC is given and its properties are demonstrated Sliding mode methods however are difficult to implement because unmodeled parasitic dynamics cause immediate and severe instability This presents a challenge for all practical applications with limited bandwidth actuators One method to deal with parasitic dynamics is the use of an asymptotic observer Observer based SMC is investigated and a method for selecting observer gains is offered An additional method for shaping the feedback loop using a filter is also developed It is shown that this SMC prefilter is equivalent to a form of model reference hedging A complete design procedure is given which takes advantage of the sliding mode boundary layer to recast the SMC as a linear control law Frequency domain loop shaping is then used to design the sliding manifold Finally three aircraft applications are demonstrated An F 18 HARV is used to demonstrate SISO and MIMO designs The third application is a linear six degree of freedom advanced tailless fighter model The observer based SMC is seen to provide excellent tracking with superior robustness to parameter changes and actuator failures
