Mittal, Wei-Sheng Lei, 2018-01-22 The acronym Laser is derived from Light Amplification by Stimulated Emission of Radiation With the advent of the ruby laser in 1960 there has been tremendous research activity in developing novel more versatile and more efficient laser sources or devices as lasers applications are ubiquitous Today lasers are used in many areas of human endeavor and are routinely employed in a host of diverse fields various branches of engineering microelectronics biomedical medicine dentistry surgery surface modification to name just a few In this book containing 10 chapters we have focused on application of lasers in adhesion and related areas The topics covered include Topographical modification of polymers and metals by laser ablation to create superhydrophobic surfaces Non ablative laser surface modification Laser surface modification to enhance adhesion Laser surface engineering of materials to modulate their wetting behavior Laser surface modification in dentistry Laser polymer welding Laser based adhesion testing technique to measure thin film substrate interface toughness Laser surface removal of hard thin ceramic coatings Laser removal of particles from surfaces Laser induced thin film debonding for micro device fabrication applications **Handbook of Laser Technology and Applications** Colin Webb, Julian D.C.

Jones, 2020-09-29 The invention of the laser was one of the towering achievements of the twentieth century At the opening of the twenty first century we are witnessing the burgeoning of the myriad technical innovations to which that invention has led The Handbook of Laser Technology and Applications is a practical and long lasting reference source for scientists and engineers who work with lasers The Handbook provides a comprehensive guide to the current status of lasers and laser systems it is accessible to science or engineering graduates needing no more than standard undergraduate knowledge of

optics Whilst being a self contained reference work the Handbook provides extensive references to contemporary work and is a basis for studying the professional journal literature on the subject It covers applications through detailed case studies and is therefore well suited to readers who wish to use it to solve specific problems of their own The first of the three volumes comprises an introduction to the basic scientific principles of lasers laser beams and non linear optics The second volume describes the mechanisms and operating characteristics of specific types of laser including crystalline solid state lasers semiconductor diode lasers fibre lasers gas lasers chemical lasers dye lasers and many others as well as detailing the optical and electronic components which tailor the laser s performance and beam delivery systems The third volume is devoted to case studies of applications in a wide range of subjects including materials processing optical measurement techniques medicine telecommunications data storage spectroscopy earth sciences and astronomy and plasma fusion research This vast compendium of knowledge on laser science and technology is the work of over 130 international experts many of whom are recognised as the world leaders in their respective fields Whether the reader is engaged in the science technology industrial or medical applications of lasers or is researching the subject as a manager or investor in technical enterprises they cannot fail to be informed and enlightened by the wide range of information the Handbook supplies

Laser Technology in Biomimetics Volker Schmidt, Maria Regina Belegatis, 2014-01-02 Lasers are progressively more used as versatile tools for fabrication purposes The wide range of available powers wavelengths operation modes repetition rates etc facilitate the processing of a large spectrum of materials at exceptional precision and quality Hence manifold methods were established in the past and novel methods are continuously under development Biomimetics the translation from nature inspired principles to technical applications is strongly multidisciplinary This field offers intrinsically a wide scope of applications for laser based methods regarding structuring and modification of materials This book is dedicated to laser fabrication methods in biomimetics It introduces both a laser technology as well as an application focused approach The book covers the most important laser lithographic methods and various biomimetics application scenarios ranging from coatings and biotechnology to construction medical applications and photonics
