Last Frost Fair:

Arcticologies Lowell Duckert, 2025-08-26 Exploring the frozen past to rethink our warming future Do we really know what cold is In *Arcticologies* Lowell Duckert delves into early modern European texts to trace how representations of frigidity from the sixteenth and seventeenth centuries have contributed to historical understandings of climate and contemporary debates on climate change Arguing that human culture and science are in fact indebted to the cold Duckert suggests that these early depictions offer critical terms for advancing the aims of climate change activism and assisting in counterapocalyptic thinking An imaginative and intellectual journey *Arcticologies* reveals the enduring role of cold in wide ranging storytelling traditions It draws on Shakespeare's *Hamlet* and *Othello* and the works of Thomas Dekker Ren Descartes and Thomas Hobbes and is informed throughout by contemporary Indigenous writing including that of Sheila Watt Cloutier and Leanne Betasamosake Simpson In reflecting on these assorted accounts Duckert sees cold as not only an environmental hardship but a source of cultural creativity and resilience highlighting moments of collaboration between humans and the icy world from arctic exploration to urban fairs on frozen rivers Cold Duckert makes clear is more than the absence of warmth Situating our contemporary obsession with impending planetary meltdown within the mazelike arcticologies of the past Duckert shows how early modern cold brought about forms of curiosity vocabulary and interspecies relationality that can serve us today In doing so he asks us to identify what has been lost and who is at risk in today's thinning cold while also urging us to imagine alternative futures focused not on inevitable and total collapse but on adaptation and preserving what remains

Ice, Mud and Blood Chris Turney, 2008-05-27 Imagine a world of wildly escalating temperatures apocalyptic flooding devastating storms and catastrophic sea levels This might sound like a prediction for the future or the storyline of a new Hollywood blockbuster but it's actually what occurred on earth in the past In a day and age when worrying forecasts for future climate change are the norm it seems hard to believe that such things happened regularly over time Can humankind decipher the past and learn from it As science gains new understanding of how the planet works it's becoming increasingly clear that no one place is disconnected from anywhere else From the Alps to the Andes seemingly unrelated parts of the world are connected in one way or another By reading this book you'll realize that we're facing challenges beyond anything our species has had to contend with before

work from one of Canada's most respected writers. In its long history the River Thames has frozen solid forty times. These are the stories of that frozen river. And so opens one of the most breathtaking and original works being published this season. *The Frozen Thames* contains forty vignettes based on events that actually took place each time the river froze between 1142 and 1895. Like a photograph captures a moment etching it forever on the consciousness so does Humphreys' achingly beautiful prose. She deftly draws us into these intimate moments transporting us through time so that we believe ourselves observers of the events portrayed. Whether it's Queen Matilda trying to escape her besieged castle in a snowstorm or lovers meeting on the frozen river in the plague years whether it's a simple farmer persuading his oxen the ice is safe or Queen Bess discovering the rare privacy afforded by the ice covered Thames the moments are fleeting and transformative for the characters and for us too. Stunningly designed and illustrated throughout with full colour period art. *The Frozen Thames* is a triumph.

What's Really Going On? Peter Durbin, 2024-03-19. Is the end near? I have documented in this book what happened before the earth was created and how it was developed into its current state. I continue with a chronological summary of the almost 6000 years since mankind has occupied the earth and explore the forces that have caused many of the world's battles including the past and current wars in the Middle East. This book also compares the historic fall of Israel to the potential downfall of the United States and discusses the real reasons we are having the climate change debate and how this is being used as a platform for world control. I explore how the powerful World Economic Forum is organising a total world reset of many of things that we hold dear. The book provides a potential timeline of when the end times may commence and the detailed logic behind this reasoning. I also provide an in depth analysis of the end times and the devastation that is ahead of us. Is it probable that this will occur within the next decade? I believe that this is essential reading for all who are interested in understanding what the future holds for yourself, your family and for all of humanity.

The Basics of Ecology Anne Wanjie, 2013-07-15. Studying ecology today is more valuable than it has ever been because of pollution and other environmental factors continuing to be a mainstream issue of concern across the globe. This volume engages the reader with bright images of animals and other life in their natural settings and informs on what is being done to preserve life. It is a valuable resource for any reader concerned about the environment.

The Great Global Warming Blunder Roy W. Spencer, 2012. *The Great Global Warming Blunder* provides a simple explanation for why forecasts of a global warming Armageddon constitute a major scientific faux pas. Climate researchers have mixed up cause and effect when they have analyzed cloud behavior. Combining illustrations from everyday experience with state of the art satellite measurements Roy W. Spencer reveals how these scientists have been fooled by Mother Nature into believing that the Earth's climate system is very sensitive to humanity's production of carbon dioxide through the use of fossil fuels. He presents evidence that recent warming rather than being the fault of humans is a result of chaotic internal natural cycles that have been causing periods of warming and cooling for thousands of years.
