determining how specific proposals for changes in the number of NIH agencies and centers should be addressed **Saving Women's Lives** National Research Council, Institute of Medicine, National Cancer Policy Board, Committee on New Approaches to Early Detection and Diagnosis of Breast Cancer, 2004-12-18 In this report The Breast Cancer Research Foundation BCRF and the Institute of Medicine IOM present a one day symposium that was held at the IOM to further disseminate the conclusions and recommendations of the joint IOM and National Research Council report Saving Women's Lives Strategies for Improving Breast Cancer Detection and Diagnosis The committee assembled for this event was asked to share insights and consider ways in which the objectives of the report could be achieved from the standpoint of what women need to know the best models of screening programs manpower risk stratification basic research and payment This symposium seeks to provide continuing food for thought and ideas for actions in support of breast cancer detection and diagnosis and saving women's lives **Schizophrenia Bulletin**, 2007 **Setting Priorities for Large Research Facility Projects Supported by the National Science Foundation** National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, Committee on Setting Priorities for NSF-Sponsored Large Research Facility Projects, 2004-07-15 In 1995 the National Science Foundation NSF created a special account to fund large several tens of millions of dollars research facilities Over the years these facilities have come to represent an increasingly prominent part of the nation's R D portfolio Recently concern has intensified about the way NSF is selecting projects for this account In 2003 six U S Senators including the chair and ranking member of the Senate Subcommittee on VA HUD and Independent Agencies Appropriations expressed these concerns in a letter to the NRC asking it to review the current prioritization process and report to us on how it can be improved This report presents a series of recommendations on how NSF can improve its priority setting process for large research facilities While noting that NSF has improved this process the report states that further strengthening is needed if NSF is to meet future demands for such projects **Future of Intelligent and Extelligent Health Environment** R.G. Bushko, 2005-11-28 The technology on our body in our body and all around us enhances our health and well being from conception to death This environment is emerging now with intelligent caring machines cyborgs wireless embedded continuous computing healthwear sensors healthons nanomedicine adaptive process control mathematical modeling and common sense systems The human body and the world in which it functions is a continuously changing complex adaptive system We are able to collect more and more data about it but the real challenge is to infer local dynamics from that data Intelligent Caring Biomechatronic Creatures and Healthmaticians mathematicians serving human health have a better chance of inferring the dynamics that needs to be understood than human physicians Humans can only process comfortably three dimensions while computers can see infinite number of dimensions We will need to trust the distributed network of healthons Intelligent Caring Creatures and NURSES New Unified Resource System Engineers to create Health Extelligence

We need new vocabulary to push forward in a new way For instance healthons are tools combining prevention with diagnosis and treatment based on continuous monitoring and analyzing of our vital signs and biochemistry The Healthon Era is just beginning We are closer and closer to the world with healthons on your body in your body and all around you where not a doctor but your primary care healthmatician warns you about an approaching headache and where NURSE programs your intelligent caring creatures so they can talk to your cells and stop disease in its tracks

The New Science of Metagenomics National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Committee on Metagenomics: Challenges and Functional Applications, 2007-06-24 Although we can't usually see them microbes are essential for every part of human life indeed all life on Earth The emerging field of metagenomics offers a new way of exploring the microbial world that will transform modern microbiology and lead to practical applications in medicine agriculture alternative energy environmental remediation and many others areas Metagenomics allows researchers to look at the genomes of all of the microbes in an environment at once providing a meta view of the whole microbial community and the complex interactions within it It's a quantum leap beyond traditional research techniques that rely on studying one at a time the few microbes that can be grown in the laboratory At the request of the National Science Foundation five Institutes of the National Institutes of Health and the Department of Energy the National Research Council organized a committee to address the current state of metagenomics and identify obstacles current researchers are facing in order to determine how to best support the field and encourage its success The New Science of Metagenomics recommends the establishment of a Global Metagenomics Initiative comprising a small number of large scale metagenomics projects as well as many medium and small scale projects to advance the technology and develop the standard practices needed to advance the field The report also addresses database needs methodological challenges and the importance of interdisciplinary collaboration in supporting this new field

NIH Extramural Center Programs Institute of Medicine, Board on Health Sciences Policy, Committee for Assessment of NIH Centers of Excellence Programs, 2004-05-21 Grants for research centers located in universities medical centers and other nonprofit research institutions account for about 9 percent of the National Institutes of Health budget Centers are popular because they can bring visibility focus and increased resources to bear on specific diseases However congressional debate in 2001 over proposed legislation directing NIH to set up centers for muscular dystrophy research highlighted several areas of uncertainty about how to decide when centers are an appropriate research mechanism in specific cases The debate also highlighted a growing trend among patient advocacy groups to regard centers

as a key element of every disease research program regardless of how much is known about the disease in question the availability of experienced researchers and other factors This book examines the criteria and procedures used in deciding whether to establish new specialized research centers It discusses the future role of centers in light of the growing trend of large scale research in biomedicine and it offers recommendations for improving the classification and tracking of center programs clarifying and improving the decision process and criteria for initiating center programs resolving the occasional disagreements over the appropriateness of centers and evaluating the performance of center programs more regularly and systematically *Biomedical Innovation in India* Parthasarathi Banerjee, 2007
