distill the latest research and practice guidelines to create clinically significant topic based reviews **Origins** Lewis Dartnell, 2019-05-14 A New York Times bestselling author explains how the physical world shaped the history of our species When we talk about human history we often focus on great leaders population forces and decisive wars But how has the earth itself determined our destiny Our planet wobbles driving changes in climate that forced the transition from nomadism to farming Mountainous terrain led to the development of democracy in Greece Atmospheric circulation patterns later on shaped the progression of global exploration colonization and trade Even today voting behavior in the south east United States ultimately follows the underlying pattern of 75 million year old sediments from an ancient sea Everywhere is the deep imprint of the planetary on the human From the cultivation of the first crops to the founding of modern states Origins reveals the breathtaking impact of the earth beneath our feet on the shape of our human civilizations Large Mammals Around the World Peter S. Seymour, 1988 *Not the End of the World* Hannah Ritchie, 2024-01-09 This eye opening and essential book Bill Gates will transform how you see our biggest environmental problems and explains how we can solve them It s become common to tell kids that they re going to die from climate change We are constantly bombarded by doomsday headlines that tell us the soil won t be able to support crops fish will vanish from our oceans and that we should reconsider having children But in this bold radically hopeful book data scientist Hannah Ritchie argues that if we zoom out a very different picture emerges In fact the data shows we ve made so much progress on these problems that we could be on track to achieve true sustainability for the first time in human history Did you know that Carbon emissions per capita are actually down Deforestation peaked back in the 1980s The air we breathe now is vastly improved from centuries ago And more people died from natural disasters a hundred years ago Packed with the latest research practical guidance and enlightening graphics this book will make you rethink almost everything you ve been told about the environment Not the End of the World will give you the tools to understand our current crisis and make lifestyle changes that actually have an impact Hannah cuts through the noise by outlining what works what doesn t and what we urgently need to focus on so we can leave a sustainable planet for future generations These problems are big But they are solvable We are not doomed We can build a better future for everyone Let s turn that opportunity into reality Cowen's History of Life Michael J. Encyclopedia of Evolution Stanley A. Rice, 2009 Evolutionary science is not only one of the greatest breakthroughs of modern science but also one of the most controversial Perhaps more than any other scientific area evolutionary science has caused us all to question what we are where we came from and how we relate to the rest of the universe Encyclopedia of Evolution contains more than 200 entries that span modern evolutionary science and the history of its development This comprehensive volume clarifies many common misconceptions about evolution For example many people have grown up being told that the fossil record does not demonstrate an evolutionary pattern and that there are many missing links In fact most of these missing links have been found and their modern representatives are often still alive today The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science The biographies chosen reflect the viewpoints of scientists working within the United States Five essays that explore interesting questions resulting from studies in evolutionary science are included as well The appendix consists of a summary of Charles Darwin's Origin of Species which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history The five essays include How much do genes control human behavior What are the ghosts of evolution Can an evolutionary scientist be religious Why do humans die Are humans alone in the universe

Global Life Systems Robert P. Clark, 2000 Humans did not begin as a global species we had to expand to

become one And we could not have done so without other living organisms becoming global along with us Robert P Clark develops in this book a global life systems perspective that delineates how biological forces mutually reinforce one another and what their globalization has meant for both human society and the biosphere While he resists biological determinism Clark traces interconnected developments among population disease agriculture trade fuels and other life systems to more thoroughly explore and elucidate the globalization of human endeavors within an ever evolving context of nature and environment His lucid and richly documented book offers a fresh look at social evolution and a broader basis for understanding the contemporary context for global change
