Largescale Transport Processes In Oceans And Atmosphere:

Large-Scale Transport Processes in Oceans and Atmosphere J. Willebrand, D.L.T. Anderson, 2012-12-06 One of the major experiments in earth science at the present time is about to begin the World Climate Research Program WCRP The objectives of WCRP are to determine the extent to which climate change can be predicted and the extent to which human activities such as increasing the level of CO₂ can influence our climate 2 To understand and possibly to predict climate change one needs a good understanding of the dynamics of the ocean the atmosphere and the processes by which they are coupled Two major programs are being developed within WCRP TOGA Tropical Oceans Global Atmosphere and WOCE World Ocean Circulation Experiment The success of these programs will depend on many things not least of which is the existence of a pool of active young researchers This NATO Advanced Study Institute brought together students and young scientists from 13 countries most of them from Europe and North America The objective was to provide them with a background in the perceived state of knowledge of atmosphere and ocean dynamics and to mediate a flavour of the problems presently concerning scientists active in climate related dynamics In the past the two disciplines of oceanography and meteorology have largely been carried out separately But for climate research both disciplines must interact strongly and another objective of this school was to bring together both oceanographers and meteorologists To promote an integrated approach the lecture presentations were divided into two formats

Ocean Processes in Climate Dynamics P.M. Malanotte-Rizzoli, Allan R. Robinson, 2012-12-06 One of the most crucial but still very poorly understood topics of oceanographic science is the role of ocean processes in contributing to the dynamics of climate and global change This book presents a series of high level lectures on the major categories of ocean atmosphere processes Three of these major issues are the focus of the lectures 1 air sea interaction processes 2 water mass formation dispersion and mixing 3 general circulation with specific emphasis on the thermohaline component Global examples in the world ocean are provided and discussed in the lectures In parallel the Mediterranean Sea is a laboratory basin in providing analogues of the above global processes relevant to climate dynamics They include the Mediterranean thermohaline circulation with its own conveyor belt intermediate and deep water mass formation and transformations dispersion and mixing No other book in the field provides a review of fundamental lectures on these processes coupled with global examples and their Mediterranean analogues

Fast Processes in Large-Scale Atmospheric Models Yangang Liu, Pavlos Kollias, 2023-12-19 Improving weather and climate prediction with better representation of fast processes

in atmospheric models Many atmospheric processes that influence Earth's weather and climate occur at spatiotemporal scales that are too small to be resolved in large scale models They must be parameterized which means approximately representing them by variables that can be resolved by model grids Fast Processes in Large Scale Atmospheric Models Progress Challenges and Opportunities explores ways to better investigate and represent multiple parameterized processes in models and thus improve their ability to make accurate climate and weather predictions Volume highlights include Historical development of the parameterization of fast processes in numerical models Different types of major sub grid processes and their parameterizations Efforts to unify the treatment of individual processes and their interactions Top down versus bottom up approaches across multiple scales Measurement techniques observational studies and frameworks for model evaluation Emerging challenges new opportunities and future research directions The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals
