*Lascaux* Norbert Aujoulat, 2005-06-07 Discovered by chance by two boys in France in 1940 the cave of Lascaux with its radiant wall paintings of bison aurochs horses and deer offers us the most astonishing view we have of the shadowy powerful animal world of the Old Stone Age some 18 000 years ago In the early 1960s when it became clear that the paintings were beginning to fade as countless tourists flocked to see them the cave was sealed ancient atmospheric conditions were restored and even scientists were allowed to enter the cave only a few hours each week Today this prehistoric monument remains closed to the public Following 10 years of research on the Lascaux cave the prehistorian and geologist Norbert Aujoulat offers us his stunning interpretation of the paintings In this lavishly illustrated volume packed with new photographs maps and explanatory diagrams of the paintings he takes us on a journey from the entrance of the cave back to its deepest and most hidden parts In the process he provides us with new insight into these remarkable works tracing the birth of ancient mythologies and of art

Bunn, 2017-07-28 The Natural Law of Cycles assembles scientific work from different disciplines to show how research on angular momentum and rotational symmetry can be used to develop a law of energy cycles as a local and global influence Angular momentum regulates small scale rotational cycles such as the swimming of fish in water the running of animals on land and the flight of birds in air Also it regulates large scale rotation cycles such as global currents of wind and water James H Bunn introduces concepts of symmetry balance and angular momentum showing how together they shape the mobile symmetries of animals Chapter 1 studies the configurations of animals as they move in a head first direction Chapter 2 shows how sea animals follow currents and tides generated by the rotational cycles of the earth In chapter 3 Bunn explores the biomechanical pace of walking as a partial cycle of rotating limbs On a large scale angular momentum governs balanced shifts in plate tectonics Chapter 4 begins with an examination of rotational wind patterns in terms of the counter balancing forces of angular momentum The author shows how these winds augment the flights of birds during migrations A final chapter centres on the conservation of energy as the most basic principle of science Bunn argues that in the nineteenth century the unity of nature was seen in the emergent concept of energy not matter as the source of power including the movements of animals and machines In each chapter Bunn features environmental writers who celebrate mobile symmetries This book will interest students naturalists and advocates of the environmental movement
