**Optical Fiber Sensor Technology** L.S. Grattan, B.T. Meggitt, 2012-12-06 Progress in optical fiber sensors The field of optical fiber sensor technology is one that continues to expand and develop at a rate that could barely have been predicted a few years ago The wealth of publications appearing in the technical literature and the burgeoning number of papers presented at the now well established series of national and international conferences which are attended by a wide selection of technically qualified optoelectronics professionals gives a clear indication of both the range and scale of the devices and applications now seen in the subject Such a rapid expansion makes it very difficult for the scientist and engineer under pressure to be both informed and effective for an employer to attend all these meetings

selectively read the appropriate literature and be able quickly to gain the knowledge in those specific areas which will give the best advantage for the work in hand To that end this volume has been planned and carefully designed to provide an essential overview and detailed specific information on those novel and exciting aspects of optical fiber sensor technology that have recently emerged with particular focus on the devices and the exciting applications of this part of optoelectronic technology in the vast international measurement and instrumentation area

Fiber Lasers Johan Meyer, Justice Sompo, Suné von Solms, 2022-02-03 Over the past two decades the use of fiber lasers in engineering applications has gradually become established as an engineering discipline on its own The development of fiber lasers is mainly the result of studies from various domains like photonics optical sensing fiber optics nonlinear optics and telecommunication Though many excellent books exist on each of these subjects and several have been written specifically to address lasers and fiber lasers it is still difficult to find one book where the diverse core of subjects that are central to the study of fiber laser systems are presented in simple and straight forward way Fiber Lasers Fundamentals with MATLAB Modelling is an introduction to the fundamentals of fiber lasers It provides clear explanations of physical concepts supporting the field of fiber lasers Fiber lasers characteristics are analyzed theoretically through simulations derived from numerical models The authors cover fundamental principles involved in the generation of laser light through both continuous wave CW and pulsing It also covers experimental configuration and characterization for both CW and Q switching The authors describe the simulation of fiber laser systems and propose numerical modelling of various fiber laser schemes MATLAB modelling and numerical computational methods are used throughout the book to simulate different fiber laser system configurations This book will be highly desirable and beneficial for both academics and industry professionals to have ample examples of fiber laser approaches that are well thought out and fully integrated with the subjects covered in the text This book is written to address
