Laser Moon:

Measure of the Moon Zdenek Kopal, C.L. Goudas, 2012-12-06 After many decades spent in astronomical semi obscurity the Moon has of late suddenly emerged to claim renewed interest on the part of the students of astronomy as well as of other branches of physical science and technology and the reasons which brought this about are indeed of historical significance From time immemorial astronomy has been debarred from the status of a genuine experimental science by the utter remoteness of the objects of its study With the exception of meteors those small freaks of cosmic matter intercepted by the Earth on its perpetual journey through space the properties of all celestial bodies outside the gravitational confines of our planet could be studied only at a distance namely from the effect of attraction exerted by their masses or from the ciphered message of their light brought to us by nimble footed photons across the intervening gaps of space A dramatic emergence of long range rockets in the last decade bids fair to bring about a profound change in this situation On September 13 1959 a memorable date in the history of human endeavour a man made missile of Russian origin crash landed on the surface of the Moon in the region of its Mare Imbrium and thus ended the age long separation of the Earth and its only natural satellite which lasted not less than 4 billion years

Moon Mission Sigmund Brouwer, 2019-05-07 A unique look at the successful though nearly disastrous Apollo 11 moon landing In a riveting narrative told from the astronauts points of view readers get to relive every step of Apollo 11's 1969 mission from ignition to moon walk to splashdown including the nail biting and relatively unknown crucial moments when it came close to failure And setting this book apart each step is linked to the innovations and discoveries from the past four centuries that made it possible It's a fascinating new perspective on an epic journey and how STEM set it in motion Readers better fasten their seat belts they're in for the ride of a lifetime

One Small Step? Gerhard Wisnewski, 2007-01-01 From the very first manned flight into orbit right up to the present day there have been serious anomalies in the official narrative of the conquest of space Bestselling author Gerhard Wisnewski dissects the history in minute detail from the first Russian missions to the final American moon project of Apollo 17 looking at films photos radio communications personal statements and other available material Using forensic methods of investigation he pieces together a complex jigsaw depicting a disturbing picture of falsifications lies and fakery in the Cold War struggle for supremacy between the Soviet Union and the United States The evidence he presents casts serious doubt on the possibility of humans ever having walked on the moon

The History of the Laser Mario Bertolotti, 2004-10-01 Since the invention of the first working laser in 1960 development of these devices has progressed at an unprecedented rate to the extent that the laser is now a common part of everyday life from the semiconductor laser used in CD players and telecommunication systems to the high power eximer lasers used in manufacturing processes This book traces

Lasers Jean-Claude Diels, Ladan Arissian, 2011-10-10 Lasers are active ingredients of our modern life but they are inconspicuous as they often go unnoticed This intuitive introductory guide will tell you all you want to know about laser technologies in very diverse fields from nuclear

and particle physics to medicine astronomy and ultra precise metrology The book is coherently focused on fundamentals and is aimed to stimulate intuition about present and future applications while unveiling the halo of myths around lasers Written by reputable laser experts who think that science should be entertaining this useful reference relies on simple analogies and illustrations rather than complex mathematics and will be suitable for students and end users of laser technologies including novices Voted a CHOICE Outstanding Academic Title 2012 Photonic Devices Jia-ming Liu,2009-06-11 Photonic devices lie at the heart of the communications revolution and have become a large and important part of the electronic engineering field so much so that many colleges now treat this as a subject in its own right With this in mind the author has put together a unique textbook covering every major photonic device and striking a careful balance between theoretical and practical concepts The book assumes a basic knowledge of optics semiconductors and electromagnetic waves Many of the key background concepts are reviewed in the first chapter Devices covered include optical fibers couplers electro optic devices magneto optic devices lasers and photodetectors Problems are included at the end of each chapter and a solutions set is available The book is ideal for senior undergraduate and graduate courses but being device driven it is also an excellent engineers reference **Faster than Light** Robert J. Nemiroff,2023-09-09 Albert Einstein knew already in the early 1900s when he first published his famous paper about the constancy of the speed of light that not only did this constancy imply that mass contains energy $E = mc^2$ but that faster than light motion could lead to paradoxes some that seemed to involve backwards time travel What are these paradoxes Why is light and its speed relevant This book will lead you through an obstacle course of conundrums and oddities building up your understanding of how light's speed creates simple but mind expanding paradoxes one conceptual riddle at a time This is not your average popular science book This is also not a textbook This book takes one theme the universally constant speed of light and shows how it may appear compromised on scales from the quantum mechanics of the very small to the cosmology of the very large and the resulting surprising implications can result Book Review 1 Imagine embarking on a journey to comprehend the physics of the entire universe with a guide who's not only an expert but makes the concepts digestible and entertaining Robert J Nemiroff offers such a journey in *Faster Than Light* a book that initially describes the speed of light then touches on subjects as esoteric as time travel using the theory of relativity and speculation on how to send information back in time among other subjects blue ink Book Review 2 takes readers on a wild ride through the ins and outs of the speed of light in this mind bending guide His primary approach is through a series of humorous thought experiments explanations are clear and concise and most of them require only logic to sort out making the book more accessible than similar titles Booklife Book Review 3 A fresh and joyous ride through the mind bending puzzles at the heart of nature's most fundamental speed that remind us that the universe is strange beyond belief Caleb Scharf Author *The Ascent of Information* Book Review 4 Better than a new particle collider Sabine Hossenfelder Author *Existential Physics* *How the Laser Happened* Charles H. laureate Charles Townes provides a highly personal look at some of the leading events in twentieth century physics Townes was inventor of the maser of which the laser is one example an originator of spectroscopy using microwaves and a pioneer in the study of gas clouds in galaxies and around stars Throughout his career he has also been deeply engaged with issues outside of academic research He worked on applied research projects for Bell Labs served on the board of directors for General Motors and devoted extensive effort to advising the government on science policy and defense This memoir traces his multifaceted career from its beginnings on the family farm in South Carolina Spanning decades of ground breaking research the book provides a hands on description of how working scientists and inventors get their ideas It also gives a behind the scenes look at the scientific community showing how scientists respond to new ideas and how they approach a variety of issues from priority and patents to the social and political implications of their work In addition Townes touches on the sociology of science uncovering some of the traditions and values that are invisible to an outsider A towering and energetic figure Townes has explored or pioneered most of the roles available to the modern scientist In addition to fundamental research he was actively involved in the practical uses of the laser and in the court cases to defend the patent rights He was a founding member of the JASONs an influential group of scientists that independently advises the government on defense policy and he played an active part in scientific decisions and policies from the Truman through the Reagan administration This lively memoir packed with first hand accounts and historical anecdotes is an invaluable resource for anyone interested in the history of science and an inspiring example for students considering scientific careers **Laser**

Nick Taylor, 2002-01-09 The fascinating true story of Gordon Gould's successful thirty year struggle to assert himself as the rightful inventor of the laser and a myth shattering behind the scenes account of the American patent process The insight struck Gould with the force of revelation He sat bolt upright in bed marveling at its perfection Soon he was at his desk writing at the top of a page in his laboratory notebook Some rough calculations on the feasibility of a Laser Light Amplification by Stimulated Emission of Radiation So began the invention of the laser in 1957 a machine that changed industry medicine and science and much of modern life Gordon Gould was a graduate student with a checkered past and a yen to invent but he had a blind spot when it came to patent rights And when a respected professor with an office next to Gould's electrified the scientific world with his own claims on the laser Gould was in for the fight of a lifetime For the next thirty years Gould battled the U S Patent Office and manufacturers to enforce his rights as the laser's inventor Rebuffed he was even denied security clearance to work on his own in **An Introduction to Lasers Theory and Applications** M N
