LHC Phenomenology Einan Gardi, Nigel Glover, Aidan Robson, 2014-08-27. This book covers a very broad spectrum of experimental and theoretical activity in particle physics from the searches for the Higgs boson and physics beyond the Standard Model to detailed studies of Quantum Chromodynamics, the B physics sectors, and the properties of hadronic matter at high energy density as realised in heavy ion collisions. Starting with a basic introduction to the Standard Model and its most likely extensions, the opening section of the book presents an overview of the theoretical and phenomenological framework of hadron collisions and current theoretical models of frontier physics. In part II, discussion of the theory is supplemented by chapters on the detector capabilities and search strategies as well as an overview of the main detector components, the initial calibration procedures, and physics samples and early LHC results. Part III completes the volume with a description of the physics behind Monte Carlo event generators and a broad introduction to the main statistical methods used in high energy physics. **LHC Phenomenology** covers all of these topics at a pedagogical level with the aim of providing young particle physicists with the basic tools required for future work on the various LHC experiments. It will also serve as a useful reference text for those working in the field.

Investigations of Field Dynamics in Laser Plasmas with Proton Imaging Thomas Sokollik, 2011-01-12

Laser driven proton beams are still in their infancy but already have some outstanding attributes compared to those produced in conventional accelerators One such attribute is the typically low beam emittance This allows excellent resolution in imaging applications like proton radiography This thesis describes a novel imaging technique the proton streak camera that the author developed and first used to measure both the spatial and temporal evolution of ultra strong electrical fields in laser driven plasmas Such investigations are of paramount importance for the understanding of laser plasma interactions and thus for optimization of laser driven particle acceleration In particular the present work investigated micrometer sized spherical targets after laser irradiation The confined geometry of plasmas and fields was found to influence the kinetic energy and spatial distribution of accelerated ions This could be shown both in experimental radiography images and in numerical simulations one of which was selected for the cover page of Physical Review Letters
