## **Last Billion Years:**

Secular Solar and Geomagnetic Variations in the Last 10,000 Years F.R. Stephenson, A.W. Wolfendale, 2012-12-06 Solar and geomagnetic variability are of considerable interest for scientists of many different persuasions and indeed one has the distinct impression that for the sun at least there is direct relevance for mankind in general as the interrelation between solar and terrestrial phenomena is starting to be appreciated. From the vast time scale of interest in the variability field, attention was confined to the last 10 000 years in a NATO Advanced Research Workshop held from April 6-10 1987 in Durham, England, and the present publication comprises the lectures given there. Such a Workshop was very timely in view of the impressive new data available from  $^{14}\text{C}$  analysis in dated tree rings and  $^{10}\text{Be}$  in polar ice cores from natural palaeomagnetic records in lacustrine sediments and from archaeomagnetic material. Also to be mentioned are new studies of historical accounts of naked eye sunspots and aurorae. All the data have contributed to improvements in understanding the relative variations of solar properties, the geomagnetic field and climate, and it is hoped that this volume will convey the flavour of these advances in knowledge. A feature of the Workshop was the lively discussions which followed so many of the papers. There were several instances of healthy disagreement and this is reflected in the opposing views presented in a number of the papers published here.

Global Catastrophes in Earth History: An Interdisciplinary Conference on Impacts, Volcanism, and Mass Mortality Virgil L. Sharpton, Peter D. Ward, 1990 The conference was held in Snowbird, Utah, October 1988 as a sequel to the Conference on Large Body Impacts held in 1981 also in Snowbird. This volume contains 58 peer reviewed papers arranged into sections that cover the major themes of the conference: catastrophic impacts, volcanism and mass mortality, geological signatures of impacts, environmental effects of impacts, patterns of mass mortality, volcanism and its effects, case histories of mass mortalities and events and extinctions at the K-T boundary. The Sower and the Seed Alan Mulhern, 2018-03-21 The Sower and the Seed explores the origins of consciousness from a mytho-psychological angle. The concept of immanence, a vast intelligence within the evolutionary process, provides the underlying philosophy of the book, presented as a creative-destructive spirit that manifests higher orders of complexity such as life, intelligence, self-consciousness, and then dissolves them. The book explores the human psyche as immersed in nature and the realm of the

Great Mother showing how the themes of fertility and power applicable to all life forms saturate the history of humanity most evidently in the period stretching from 40 000 years ago up to modern civilizations The book examines in particular the transition to patriarchal religious consciousness in which a violent separation from the world of nature took place

**Disturbing the Solar System** Alan E. Rubin,2021-11-09 The solar system has always been a messy place in which gravity wreaks havoc Moons form asteroids and comets crash into planets ice ages commence and dinosaurs disappear By describing the dramatic consequences of such disturbances this authoritative and entertaining book reveals the fundamental interconnectedness of the solar system and what it means for life on Earth After relating a brief history of the solar system Alan Rubin describes how astronomers determined our location in the Milky Way He provides succinct and up to date accounts of the energetic interactions among planetary bodies the generation of the Earth s magnetic field the effects of other solar system objects on our climate the moon s genesis the heating of asteroids and the origin of the mysterious tektites Along the way Rubin introduces us to the individual scientists including the famous the now obscure and the newest generation of researchers who have enhanced our understanding of the galactic neighborhood He shows how scientific discoveries are made he discusses the uncertainty that presides over the boundaries of knowledge as well as the occasional reluctance of scientists to change their minds even when confronted by compelling evidence This fresh historical perspective reveals science as it is an imperfect but self correcting enterprise Journeying to the frontiers of knowledge Rubin concludes

with the exciting realm of astrobiology He chronicles the history of the search for life on Mars and describes cutting edge lines of astrobiological inquiry including panspermia the possible transfer of life from planet to planet the likelihood of technologically advanced alien civilizations in our galaxy and our probable responses to alien contact Authoritative and up to date but also entertaining and fluidly written *Disturbing the Solar System* will appeal to any reader who has ever picked up a rock or gazed at the moon with a sense of wonder Final History Raymond E. Schar, 2016-04-28 *Final History* the title indicating the imminent demise of humanity and perhaps the Earth itself is for young and old readers alike who are interested in history their origins where we are headed and the mysteries of the universe Beginning with the big bang yet including alternate theories of the universes origins throughout the book alternate theories of many other things such as a supercontinent Pangaea and the Ice Age and even today's global warming are provided for consideration by the reader What has been taught in classrooms as history is never by any means settled as assumed **Neo-Aristotelian Perspectives on Contemporary Science** William M.R. Simpson, Robert C. Koons, Nicholas J. Teh, 2017-10-19 The last two decades have seen two significant trends emerging within the philosophy of science the rapid development and focus on the philosophy of the specialised sciences and a resurgence of Aristotelian metaphysics much of which is concerned with the possibility of emergence as well as the ontological status and indispensability of dispositions and powers in science Despite these recent trends few Aristotelian metaphysicians have engaged directly with the philosophy of the specialised sciences Additionally the relationship between fundamental Aristotelian concepts such as hylomorphism substance and faculties and contemporary science has yet to receive a critical and systematic treatment *Neo Aristotelian Perspectives on Contemporary Science* aims to fill this gap in the literature by bringing together essays on the relationship between Aristotelianism and science that cut across interdisciplinary boundaries The chapters in this volume are divided into two main sections covering the philosophy of physics and the philosophy of the life sciences Featuring original contributions from distinguished and early career scholars this book will be of interest to specialists in analytical metaphysics and the philosophy of science *Galaxies* Francoise Combes, 2021-03-23 *Galaxies* are vast ensembles of stars gas and dust embedded in dark matter halos They are the basic building blocks of the Universe gathered in groups clusters and super clusters They exist in many forms either as spheroids or disks Classifications such as the Hubble sequence based on mass concentration and gas fraction and the color-magnitude diagram which separates a blue cloud from a red sequence help to understand their formation and evolution Galaxies spend a large part of their lives in the blue cloud forming stars as spiral or dwarf galaxies Then via a mechanism that is still unclear they stop forming stars and quietly end in the red sequence as spheroids This transformation may be due to galaxy interactions or because of the feedback of active nuclei through the energy released by their central super massive black holes These mechanisms could explain the history of cosmic star formation the rate of which was far greater in the first half of the Universe's life *Galaxies* delves into all of these surrounding subjects in six chapters written by dedicated specialist
