Critical History of a Concept Eric Schatzberg explains why technology is so difficult to define by examining its three thousand year history one shaped by persistent tensions between scholars and technical practitioners Since the time of the ancient Greeks scholars have tended to hold technicians in low esteem defining technical practices as mere means toward ends defined by others Technicians in contrast have repeatedly pushed back against this characterization insisting on the dignity creativity and cultural worth of their work The tension between scholars and technicians continued from Aristotle through Francis Bacon and into the nineteenth century It was only in the twentieth century that modern meanings of technology arose technology as the industrial arts technology as applied science and technology as technique Schatzberg traces these three meanings to the present day when discourse about technology has become pervasive but confusion among the three principal meanings of technology remains common He shows that only through a humanistic concept of technology can we understand the complex human choices embedded in our modern world
