Barry, 2002-12-30 Language issues are intrinsically part of every classroom setting Therefore there is a need to present the linguistic perspective to all teachers and teachers in training This perspective assumes that a complex system is learned by children at an early age with little conscious instruction It recognizes that languages change over time and that variation based on region ethnic identity gender social class and social context is inherent to language Focusing more on the practical than the theoretical Barry aims to engage teachers and education students in discussion of the relevance of linguistics to teaching and to encourage them to bring their own expertise to the discussion Based on the research of scholars in linguistics and related disciplines Barry's volume helps teachers synthesize some of the foundations of classic

Written Corrective Feedback in Second Language Acquisition and Writing John Bitchener,Dana R. Ferris,2012-03-15 What should language and writing teachers do about giving students written corrective feedback This book surveys theory research and practice on the important and sometimes controversial issue of written corrective feedback also known as error grammar correction and its impact on second language acquisition and second language writing development Offering state of the art treatment of a topic that is highly relevant to both researchers and practitioners it critically analyzes and synthesizes several parallel and complementary strands of research work on error feedback both oral and written in SLA and studies of the impact of error correction in writing composition courses and addresses practical applications Drawing from both second language acquisition and writing composition literature this volume is the first to intentionally connect these two separate but

important lines of inquiry Language and Human Behavior Derek Bickerton, 2016-06-01 What this book proposes to do writes Derek Bickerton is to stand the conventional wisdom of the behavioral sciences on its head instead of the human species growing clever enough to invent language it will view that species as blundering into language and as a direct result of that becoming clever According to Bickerton the behavioral sciences have failed to give an adequate account of human nature at least partly because of the conjunction and mutual reinforcement of two widespread beliefs that language is simply a means of communication and that human intelligence is the result of the rapid growth and unusual size of human brains Bickerton argues that each of the properties distinguishing human intelligence and consciousness from that of other animals can be shown to derive straightforwardly from properties of language In essence language arose as a representational system not a means of communication or a skill and not a product of culture but an evolutionary adaptation The author stresses the necessity of viewing intelligence in evolutionary terms seeing it not as problem solving but as a way of maintaining homeostasis the preservation of those conditions most favorable to an organism the optimal achievable conditions for survival and well being Nonhumans practice what he calls on line thinking to maintain homeostasis but only humans can employ off line thinking only humans can assemble fragments of information to form a pattern that they can later act upon without having to wait on that great but unpunctual teacher experience The term protolanguage is used to describe the stringing together of symbols that prehuman hominids employed It did not allow them to turn today's imagination into tomorrow's fact But it is just this power to transform imagination into fact that distinguishes human behavior from that of our ancestral species and indeed from that of all other species It is exactly what enables us to change our behavior or invent vast ranges of new behavior practically overnight with no concomitant genetic changes Language and Human Behavior should be of interest to anyone in the behavioral and evolutionary sciences and to all those concerned with the role of language in human behavior **Treatment of Error in Second Language Student Writing, Second Edition** Dana Ferris, 2011-09-21 Treatment of Error offers a realistic well reasoned account of what teachers of multilingual writers need to know about error and how to put what they know to use As in the first edition Ferris again persuasively addresses the fundamental error treatment questions that plague novice and expert writing specialists alike What types of errors should teachers respond to When should we respond to them What are the most efficacious ways of responding to them And ultimately what role should error treatment play in the teaching of the process of writing The second edition improves upon the first by exploring changes in the field since 2002 such as the growing diversity in what is called L2 writers the blurring boundaries between native and non native speakers of English the influence of genre studies and corpus linguistics on the teaching of writing and the need the move beyond error to second language development in terms of approaching students and their texts It also explores what teacher preparation programs need to do to train teachers to treat student error The second edition features an updating of the literature in all chapters a new chapter on academic language development a postscript on how to

integrate error treatment language development suggestions in Chapters 4 6 into a writing class syllabus the addition of discussion analysis questions at the end of each chapter plus suggested readings to make the book more useful in pedagogy or teacher development workshops
