English/Igbo Translation of Common Medical Terms NTAPI ASUSU BEKEE UFODU NKE NDI DOKITA N'ONU IGBO Uchenna Nwosu, MD, FACOG,2009-11-11 Medical exploitation often occurs because a patient does not understand the nature of his or her illness Consequently the patient falls prey to simple explanations like nails in the body causing pain or obstructing the normal progress of labor and delivery The aim of this book is to improve doctor patient communication in Igbo language by establishing an Igbo medical vocabulary which both the doctor and patient can understand and speak Ancillary objectives include the following Assignment of names to some organ systems of the body that are currently unnamed in Igbo language and explanation of their functions Assignment of names to disease causing agents such as virus

and bacteria which are not visible with the naked eye Introduction of the concept of chronic disease such as hypertension and diabetes which can only be controlled but not usually curable Introduction of modern cell biology in Igbo language We have met many challenges in writing this book First we found that the Igbo language is rich in naming external parts of the body but lacks words for some internal organs and organ systems such as the endocrine organs the reticuloendothelial system the vascular system the lymphatic system etc It even lacks the concept of cells and tissues so that organs are only understood as they appear to the naked eyes Second we noted that some organ systems are lumped together in Igbo language even though each system has its distinct group of diseases For instance there are no words to differentiate string like structures in the body Thus nerves arteries veins tendons ligaments lymphatic vessels and even fascia are collectively known as akwara Our charge was to name these parts individually in Igbo Third disease causing agents not visible with the naked eyes such as bacteria and viruses are not known in Igbo language and needed newly minted words Perhaps the most difficult challenge we faced is the fact that Igbo language lacks the flexibility of the English language which borrows its medical terms very liberally from Greek and Latin roots to create words that did not exist in the language For instance the word atherosclerosis is derived from the Greek root ather meaning gruel or dirt and skiros meaning hard Since Igbo language lacks such close interaction with other languages English to Igbo interpretation of medical terms becomes necessarily descriptive and long Where we have interpreted a medical term with more than one Igbo word we have tried to preserve the essence of the term For instance we have named atherosclerosis At t wa bara meaning dirt in the blood channel We have emphasized the concept of chronic disease in contrast with the well understood model of acute illnesses In this regard we have highlighted hypertension Obara Mgbanni Elu stroke t kara diabetes r a shuga heart attack k k mkp r obi and heart failure Okuko af mkp r obi This is particularly important because chronic diseases require lifetime treatment unlike the familiar model of acute diseases such as malaria ba anw nta or appendicitis Amah a mgbakwunye eriri af that requires only brief or intermittent treatment Since Igbo culture is technologically challenged we have difficulty coming up with a language that reflects the technology of modern medicine such as x ray ultrasound centrifuge CAT scan etc We have not addressed medical technology in any detail in this issue In introducing the fundamentals of modern concept of cell biology and genetics in Igbo language we have made it possible for secondary and post secondary school students to understand the structure and functions of the cell organelles the way they never did before It is a significant departure from memorization of just words to explanation of th
