The progressive in 19th-century English Erik Smitterberg, 2016-08-29 The present volume is an empirical corpus based study of the progressive in 19th century English As the 1800s have been relatively neglected in previous research and as the study is based on a new cross genre corpus focusing on this period CONCE A Corpus of Nineteenth Century English the volume adds significantly to our knowledge of the historical development of the progressive The use of two separate measures enables an accurate account of the frequency development of the progressive which is also related to multi feature multi dimensional analyses Other topics covered include the complexity of progressive verb phrases and the distribution of the construction across linguistic parameters such as clause type Special attention is paid to progressives that express something beyond purely aspectual meaning The results show that the progressive became more fully integrated into English grammar over the 19th century but also that linguistic and extralinguistic parameters affected this integration process for instance the construction was more common in women s than in men s private letters Owing to the wide methodological scope of the study it is of interest to linguists specializing in corpus linguistics language variation and change verbal syntax the progressive or the linguistic expression of aspect either in synchrony or diachrony

Situational English Paul Hancock, 1999 **The Grammar of the English Tense System**, 2008-08-22 The Grammar of the English Tense System forms the first volume of a four volume set The Grammar of the English Verb Phrase The other volumes to appear over the next few years will deal with mood and modality aspect and voice The book aims to provide a grammar of tense which can be used both as an advanced reference grammar for example by MA

level or postgraduate students of English or linguistics and as a scientific study which can act as a basis for and stimulus to further research. It provides not only a wealth of data but also a unique framework for the study of the English tense system which achieves great predictive and explanatory power on the basis of a limited number of relatively simple rules. The framework provided allows for an analysis of the semantics of individual tenses which reflects the role of tenses not only in locating situations in time relative to speech time but also in relating situations in time relative to one another to form temporally coherent discourse. Attention is paid to the relations between tenses. On the one hand we can identify sets of tenses linked to particular temporal areas such as the past or the future. These sets of tenses provide for the expression of a system of temporal relations in a stretch of discourse in which all the situations are located within the same temporal area. On the other hand there are many contexts in which speakers might in theory choose between two or more tenses to locate a situation e.g. when we choose between the past tense and the present perfect to locate a situation before speech time and the book examines the difference that a choice of one or the other tense may make within a discourse context. The book moves from a detailed exploration of the meaning and use of individual tenses to a thorough analysis of the way in which tenses can be seen to function together as sets and finally to a detailed examination of tenses in and tenses interacting with temporal adverbials. Original data is used frequently throughout the book to illustrate the theory discussed.

Assessing Listening for Chinese English Learners Pan Zhixin, 2016-12-08. This book reports in detail the newly developed Communicative Listening Comprehension Test (CLCT) for the National College English Test (CET) of China. Following the principles of communicative testing in general and test construction approach proposed by Bachman and Palmer 1996 in particular the project develops CLCT for CET 4 and CET 6. The research begins with the construction of frameworks of listening task characteristics and communicative listening ability. Subsequently based on a survey of Chinese college students' English listening needs and an analysis of listening tasks in influential English listening course books and public tests CLCT 4 and CLCT 6 test specifications are developed. Finally sample papers are produced and a series of posteriori studies are conducted to examine the difficulty and usefulness of the newly developed notes completion task type in two CLCT tests. As an example of successful integration of communicative testing theories and test construction practice this research provides valuable insights into listening test development for other large scale tests.
