Memory Jordi Fernández, 2019-09-02 Jordi Fernández here offers a philosophical investigation of memory one which engages with memory s philosophically puzzling characteristics in order to clarify what memory is Memories interact with mental states of other types in a particular way and they also have associated feelings that these other mental states lack They are special in terms of their representational capacity too since one can have memories of objective events as well as memories of one s own past experiences Finally memories are epistemically unique in that beliefs formed on the basis of memories are protected from certain errors of misidentification and are justified in a way which does not rely on any cognitive capacity other than memory To explain these unique features Fernández proposes that memories have a particular functional role which involves past perceptual experiences and beliefs about the past He suggests that memories have a particular content as well namely that they represent themselves as having a certain causal origin Fernández then explains the feelings associated with our memories as the experience of some of the things that our memories represent things such as our own past experiences or the fact that memories originate in those experiences He also accounts for the special justification for belief afforded by our memories in terms of the content that memories have The resulting picture is a unified account of several philosophically interesting aspects of memory one that will appeal to philosophers of mind metaphysicians and epistemologists alike Cincinnati Magazine , 1979-08 Cincinnati Magazine taps into the DNA of the city exploring

*Modern Principles of Economics* Tyler Cowen,Alex Tabarrok,2009-10-09

From the authors See the Invisible Hand Understand Your World That s the tagline of *Modern Principles* and our teaching philosophy Nobel laureate Vernon Smith put it this way At the heart of economics is a scientific mystery a scientific mystery as deep fundamental and inspiring as that of the expanding universe or the forces that bind matter How is order produced from freedom of choice We want students to be inspired by this mystery and by how economists have begun to solve it Thus we show how markets interconnect and respond in surprising ways to changes in resources and preferences Consider for example how markets respond to a reduction in the supply of oil Of course the price of oil increases giving consumers an incentive to use less and suppliers an incentive to discover more But an increase in the price of oil also encourages Brazilian sugar cane farmers to devote more of their production to ethanol and less to sugar thereby driving up the price of sugar An increase in the price of sugar means a reduction in the quantity of candy demanded So one way the market responds to a reduction in the supply of oil is by encouraging consumers to eat less candy In analyses like this we teach students to see the invisible hand and in so doing to understand their world Similarly we offer a unique and simple proof of the amazing invisible hand theorem that without any central direction competitive markets allocate production across firms in a way that minimizes aggregate costs To understand their world students must understand when self interest promotes the social interest and when it does not Thus *Modern Principles* has in depth analyses of externalities public goods and ethical issues with market incomes and trade Moreover we always discuss economic theory in the context of real world problems such as the decline of the ocean fisheries climate change and the shortage of human organs for transplant
